

UX and UI Audit

Cloud Power · Current site vs redesign

Summary

The redesign keeps all the content of cloud-power.eu. It makes the site easier to read, faster, and clearer about what to do next.

	Current site	Redesign
Text readability	19 texts hard to read	Stronger contrast; two small colours still to fix (O-2)
Fonts	4 different fonts	One main font + a monospace font for labels
Buttons	5 different styles	One consistent button system
Menu	8 links of equal weight	Services menu and one button
Speed on phone (out of 100)	68–78	91–99
Ways to get in touch	9 links with 5 different labels	3 buttons, all “Contact Us”
Contact form	2 different forms	1 form
Unfinished pages	Template pages are public	Removed

Five small items are still open before launch, the main one being a menu for phones. They are listed at the end, under Next steps.

UI (User Interface)

UI-1 · Colour and contrast

Current site. The brand colours are right, but the light logo cyan carries text. Measured with axe-core:

- page titles, cyan #12D3D6 on mint: 1.79:1;
- buttons, white on cyan: 1.85:1;
- Why Choose boxes: 2.04–3.25:1;
- About paragraphs, light grey #F0F0F0: readable on the background video, but 1.1:1 on the mint background shown while the video loads or if it fails.

WCAG AA requires 4.5:1 for normal text.

Redesign.

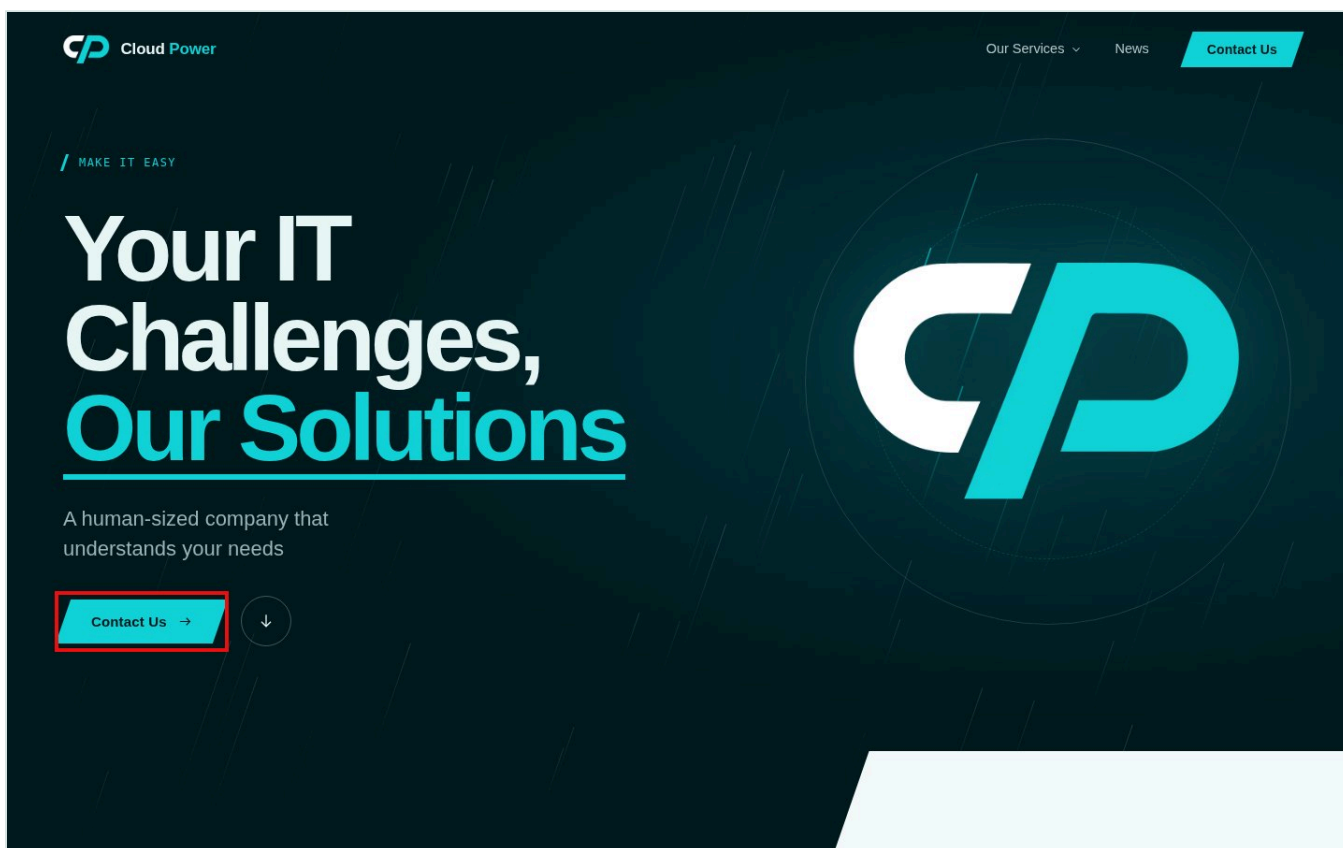

- One palette: abyss #001A1E, teal #002F35, cyan #12D3D8, mint and paper.
- Cyan is kept for buttons and highlights, with dark text on it (9.7:1).
- On light backgrounds, a darker “cyan ink” #077E83 (4.6:1).
- Body text: #3E4042 on paper (9.9:1).

Why it is better. Text is easier to read, including for people with low vision and those using phones outdoors. Cyan highlights key elements, helping users find the main action faster.

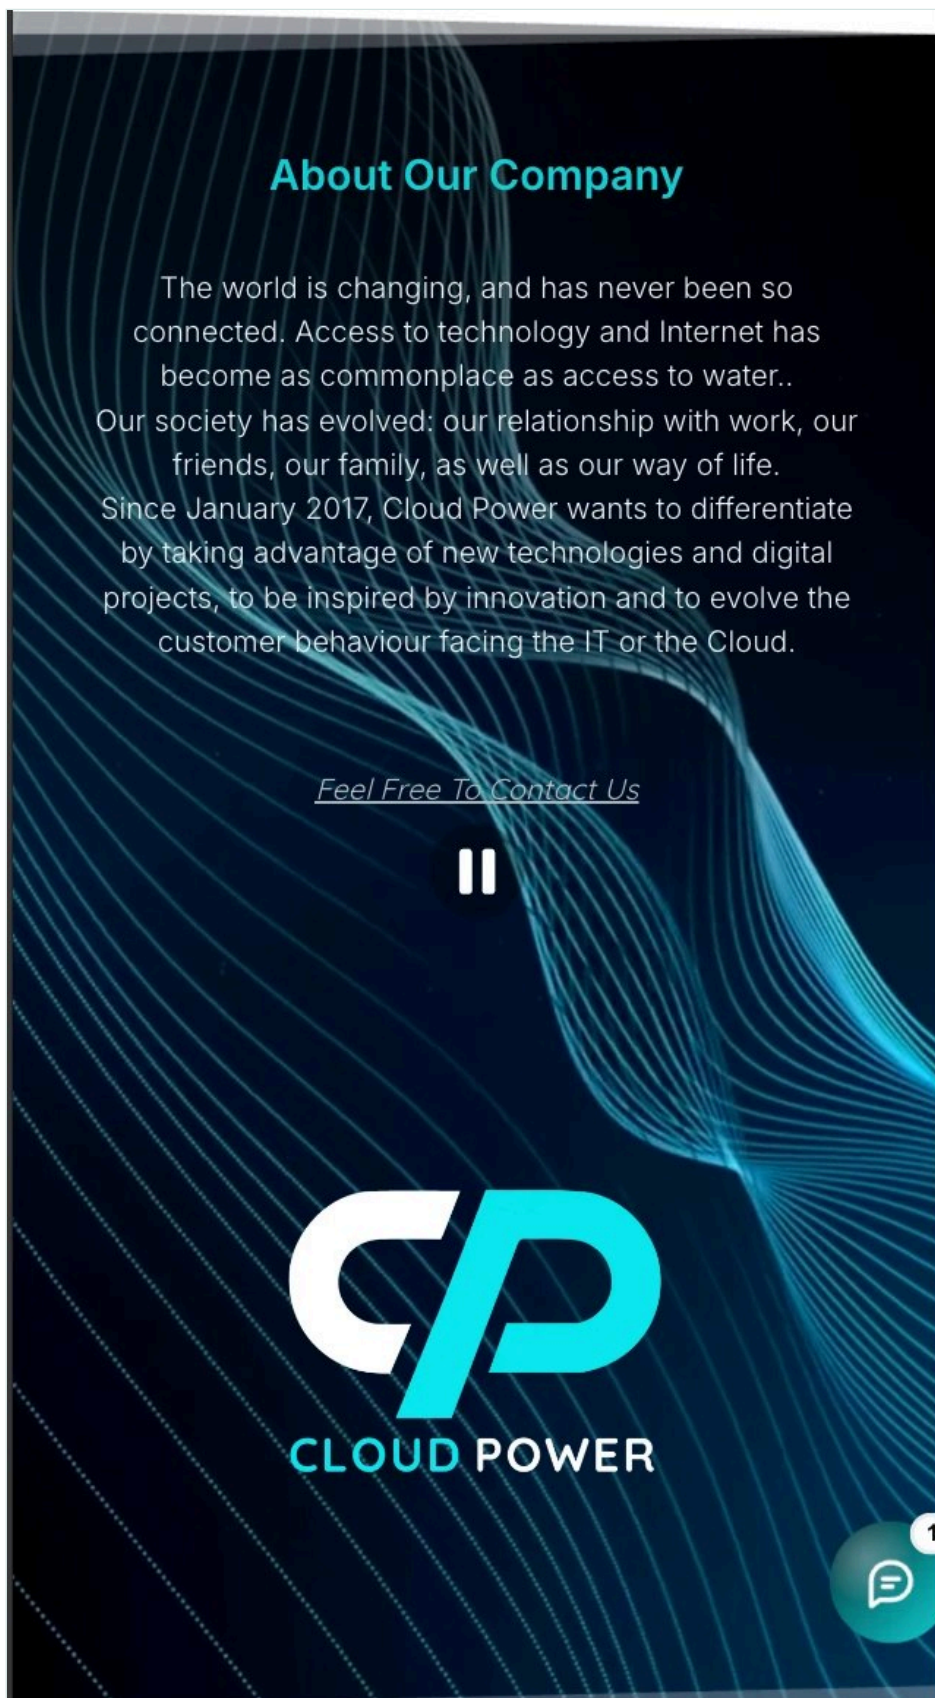

Current site — Homepage → first screen, desktop. Red frame: the main Contact Us button, white text on light cyan (1.85:1).

Redesign — index.html → first screen, desktop. Red frame: the same button with dark text on cyan (9.7:1).

Current site — Homepage → About Our Company, phone (390 px), with the background video loaded. Without the video, the same light text sits on the mint background (1.1:1).

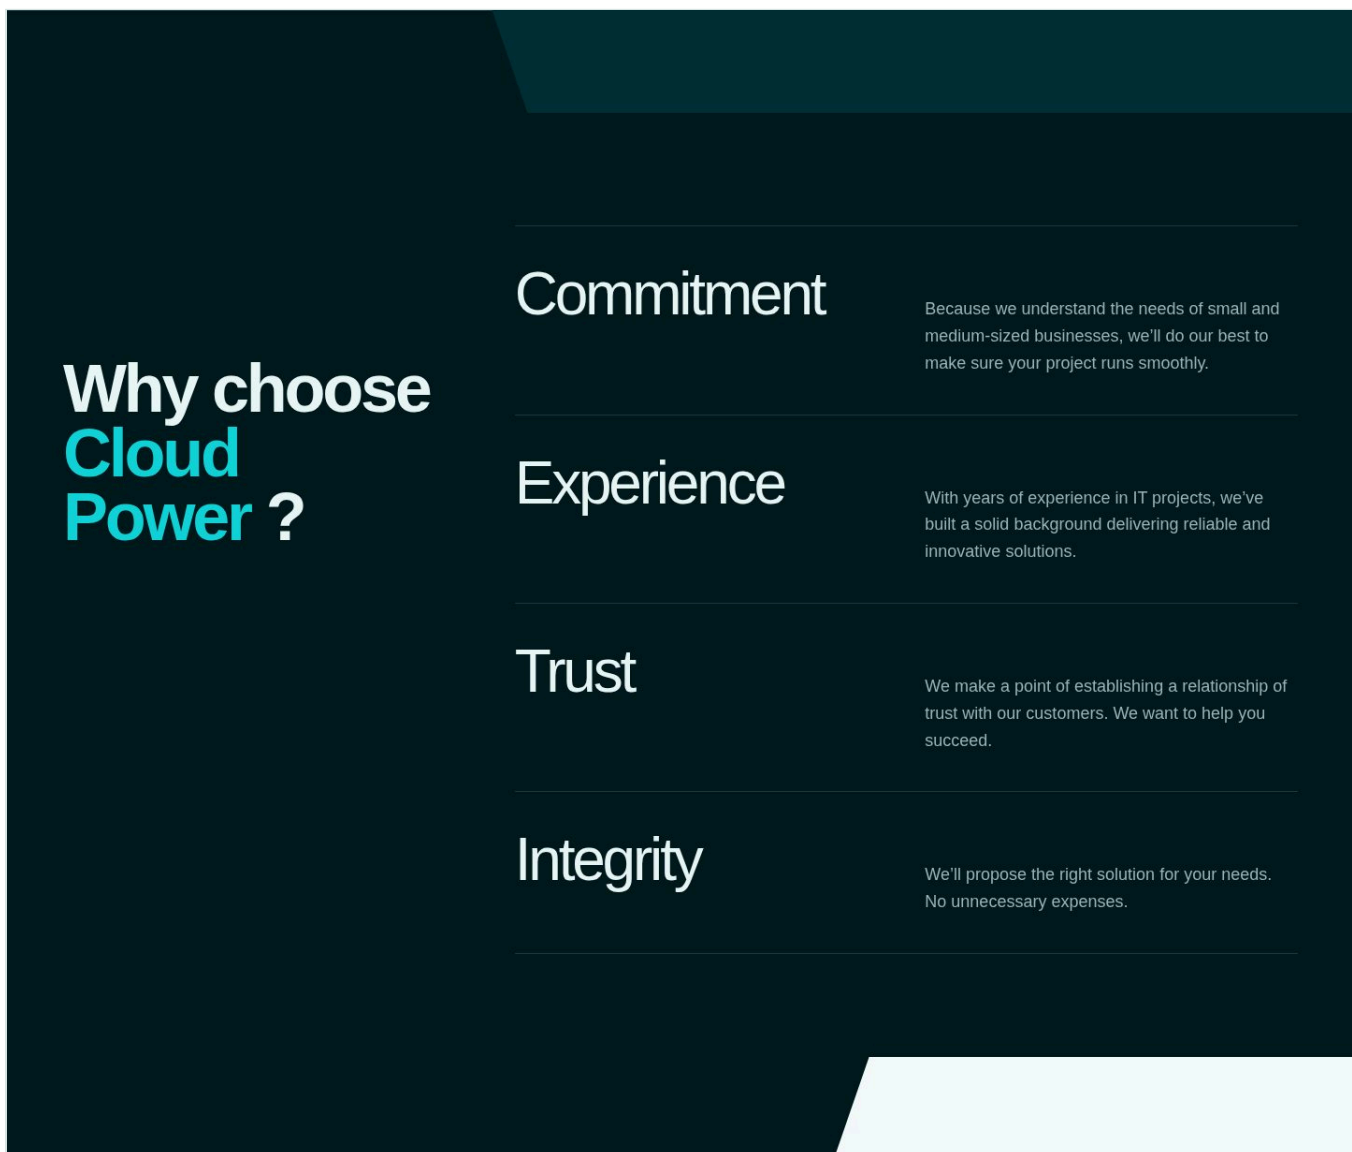

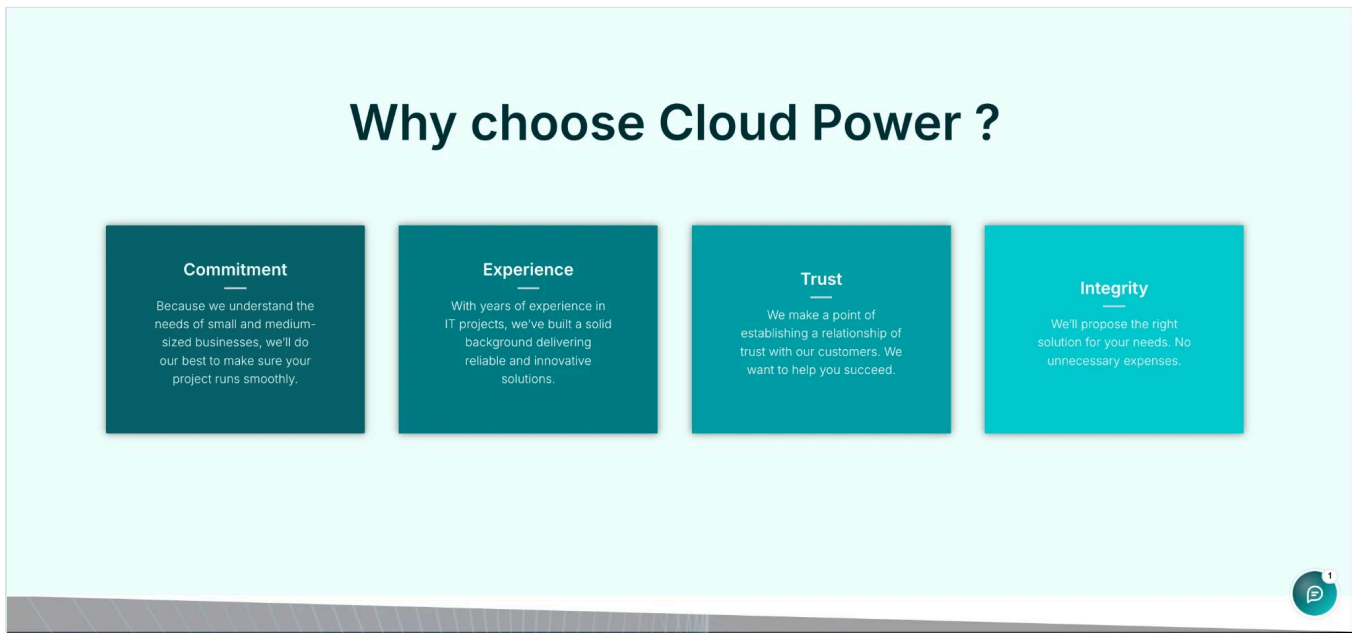

About Our Company

The world is changing, and has never been so connected. Access to technology and Internet has become as commonplace as access to water..

Our society has evolved: our relationship with work, our friends, our family, as well as our way of life.

Since January 2017, Cloud Power wants to differentiate by taking advantage of new technologies and digital projects, to be inspired by innovation and to evolve the customer behaviour facing the IT or the Cloud.

UI-2 · Typography

Current site.

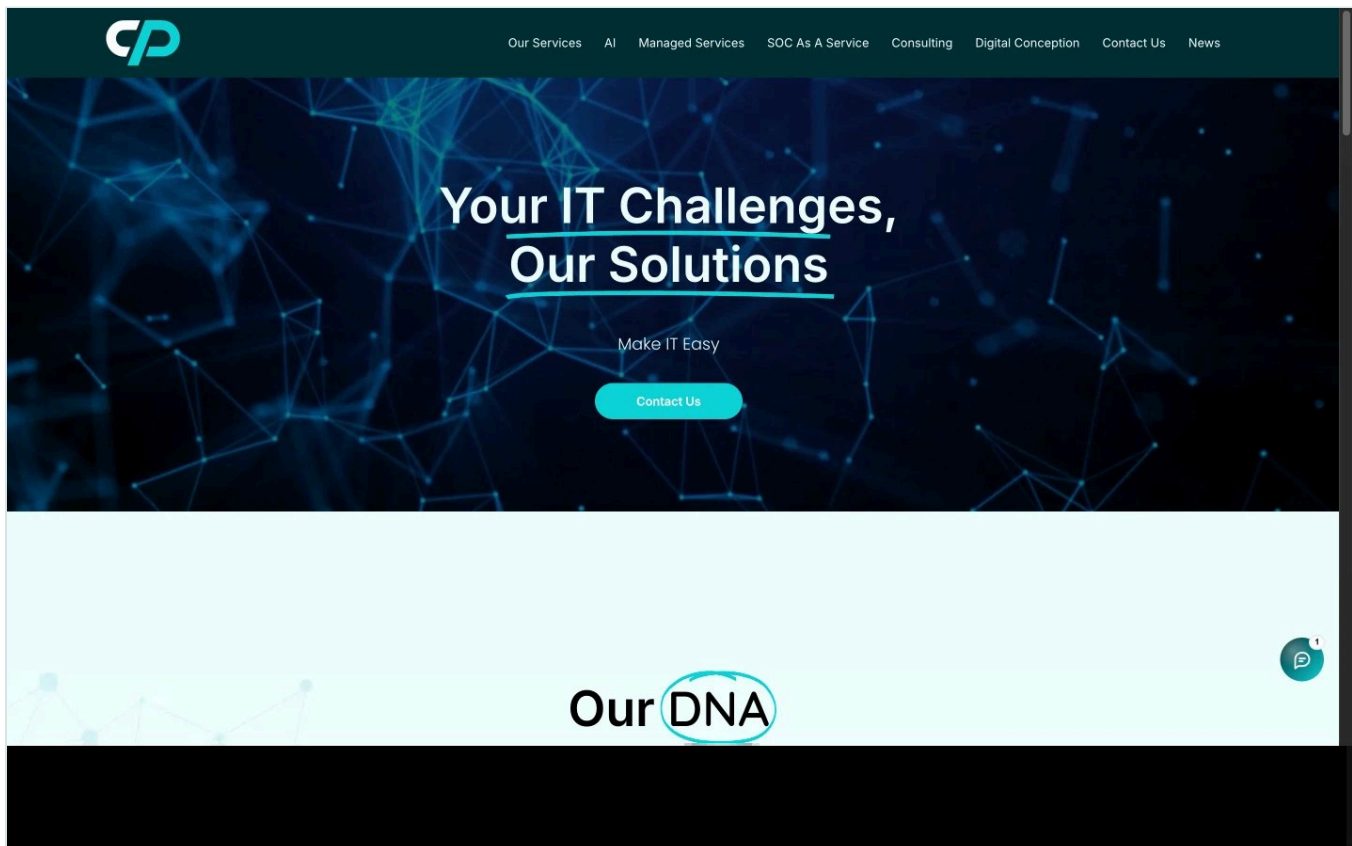

- Four font families: Inter, Poppins, Quicksand, Inter Tight.
- Up to 12 font sizes on one page (SOC).
- Title Case on almost every heading and button.
- Four H1s on the homepage, while the main promise is an H4.

Redesign.

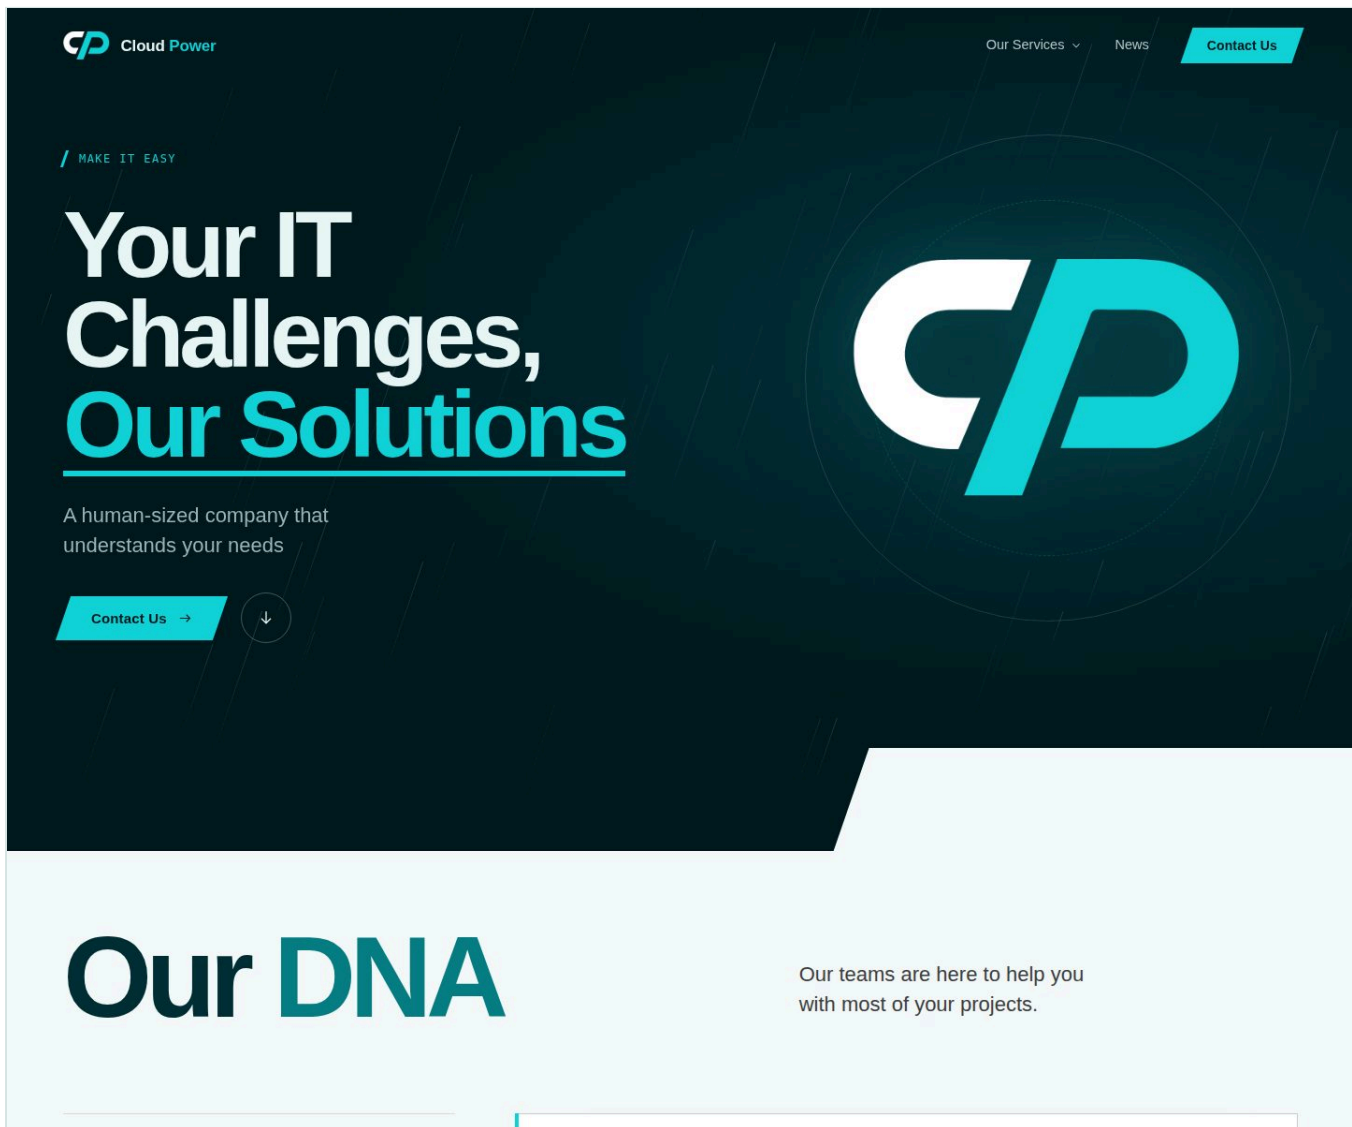

- One main font family, with Geist Mono for small labels.
- Body text at 17 px with 1.6 line height.
- Section titles at 44–132 px that scale with the screen.
- One H1 per page, H2 per section, H3 per item.

Why it is better. Clear size steps make each page quick to scan. Fewer font files load faster. The heading outline helps screen readers and search engines.

Current site — Homepage → first screen and Our DNA title, desktop.

Redesign — index.html → first screen and Our DNA title, desktop.

UI-3 · Layout clarity

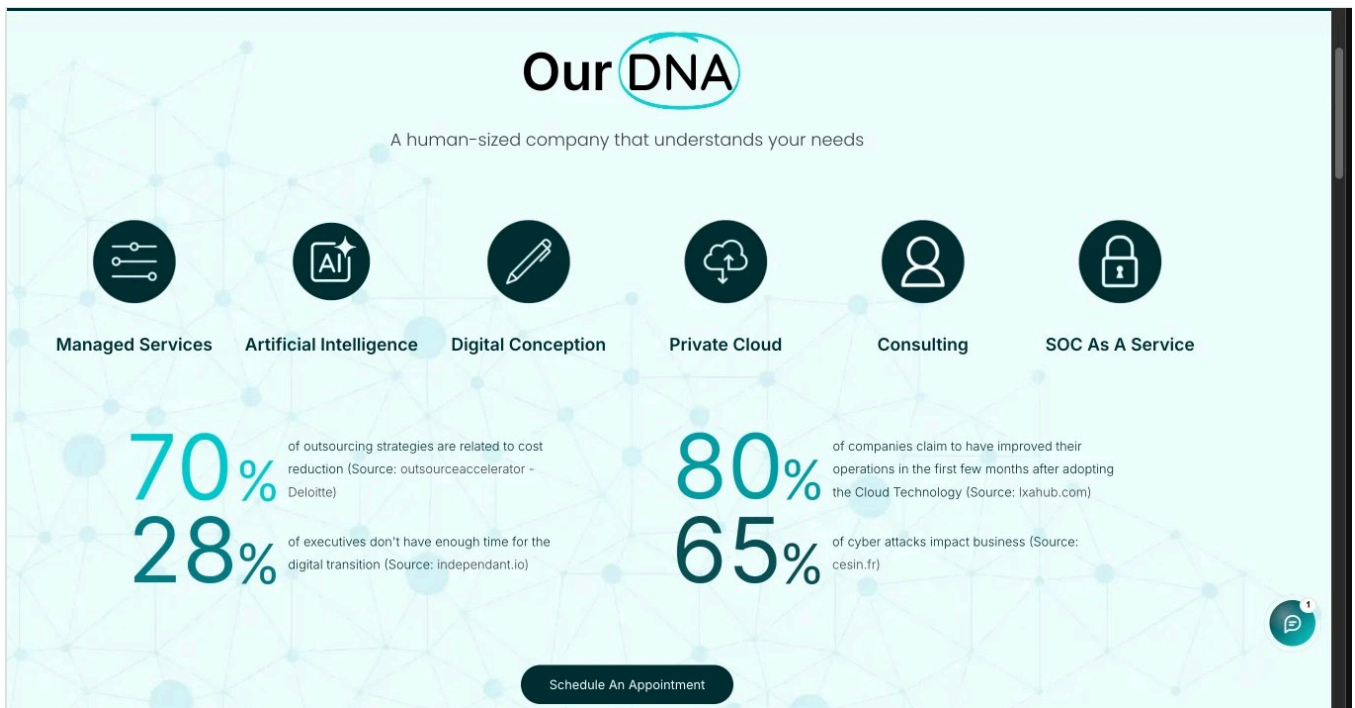

Current site. The homepage shows six services as round icons with names only. Descriptions are only on the inner pages, so visitors cannot compare services on the homepage.

Redesign.

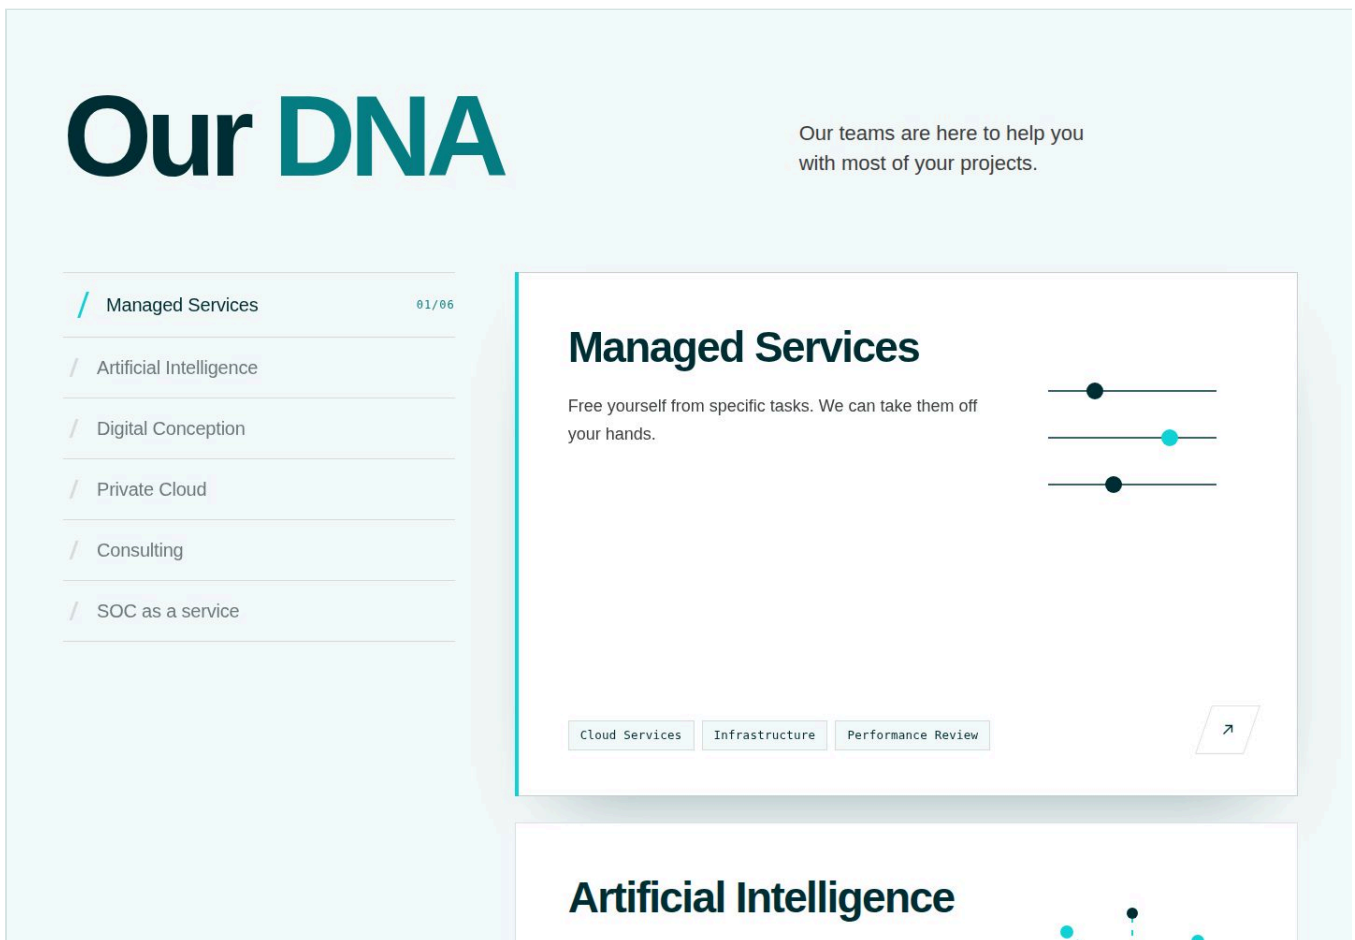

- Our DNA has a numbered index (01/06–06/06) that follows the scroll.
- One large panel per service: its own description and sub-offers, a drawing, and a link to the page.
- Sections alternate light, teal and dark backgrounds, so each one reads as a separate chapter.

Why it is better. Visitors see all six services and their content in one scroll. They open the right page with a clear expectation, instead of clicking through to find out.

Current site — Homepage → Our DNA: six icons with names, desktop.

Redesign — index.html → Our DNA: index and first service panel, desktop.

UI-4 · Buttons

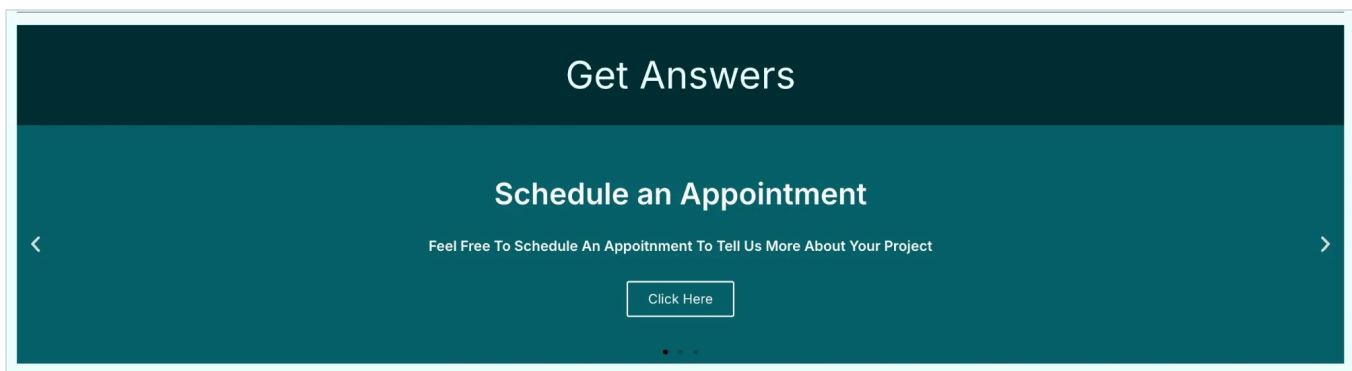

Current site. Five button styles on one page: cyan pill, dark pill, outlined “Click Here”, cyan bars in capitals, text links. Most fail contrast.

Redesign.

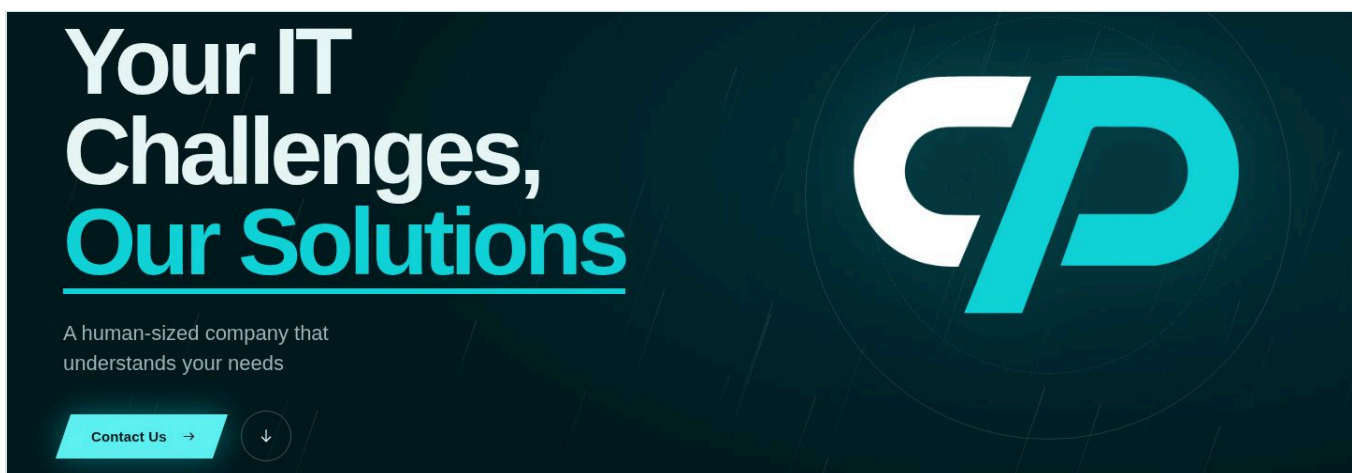

- Primary style: slanted at 19°, the angle of the slash in the logo. Cyan with a dark label; on hover it brightens and the arrow moves.
- Secondary style: an outline.
- Labels name the action: “Contact Us”.

Why it is better. One consistent button system, with a primary and a secondary style, gives each style one meaning, so visitors quickly learn what the main action looks like. The logo angle ties the buttons to the brand.

Current site — Homepage → Get Answers slider with its “Click Here” button, desktop.

Redesign — index.html → hero, mouse over the Contact Us button, desktop.

UI-5 · Images and icons

Current site.

- 24 images without alt text.
- The four statistics are pictures of numbers.

- Heavy PNG files of 155–197 KB.
- A stock photo on the AI page.

Redesign.

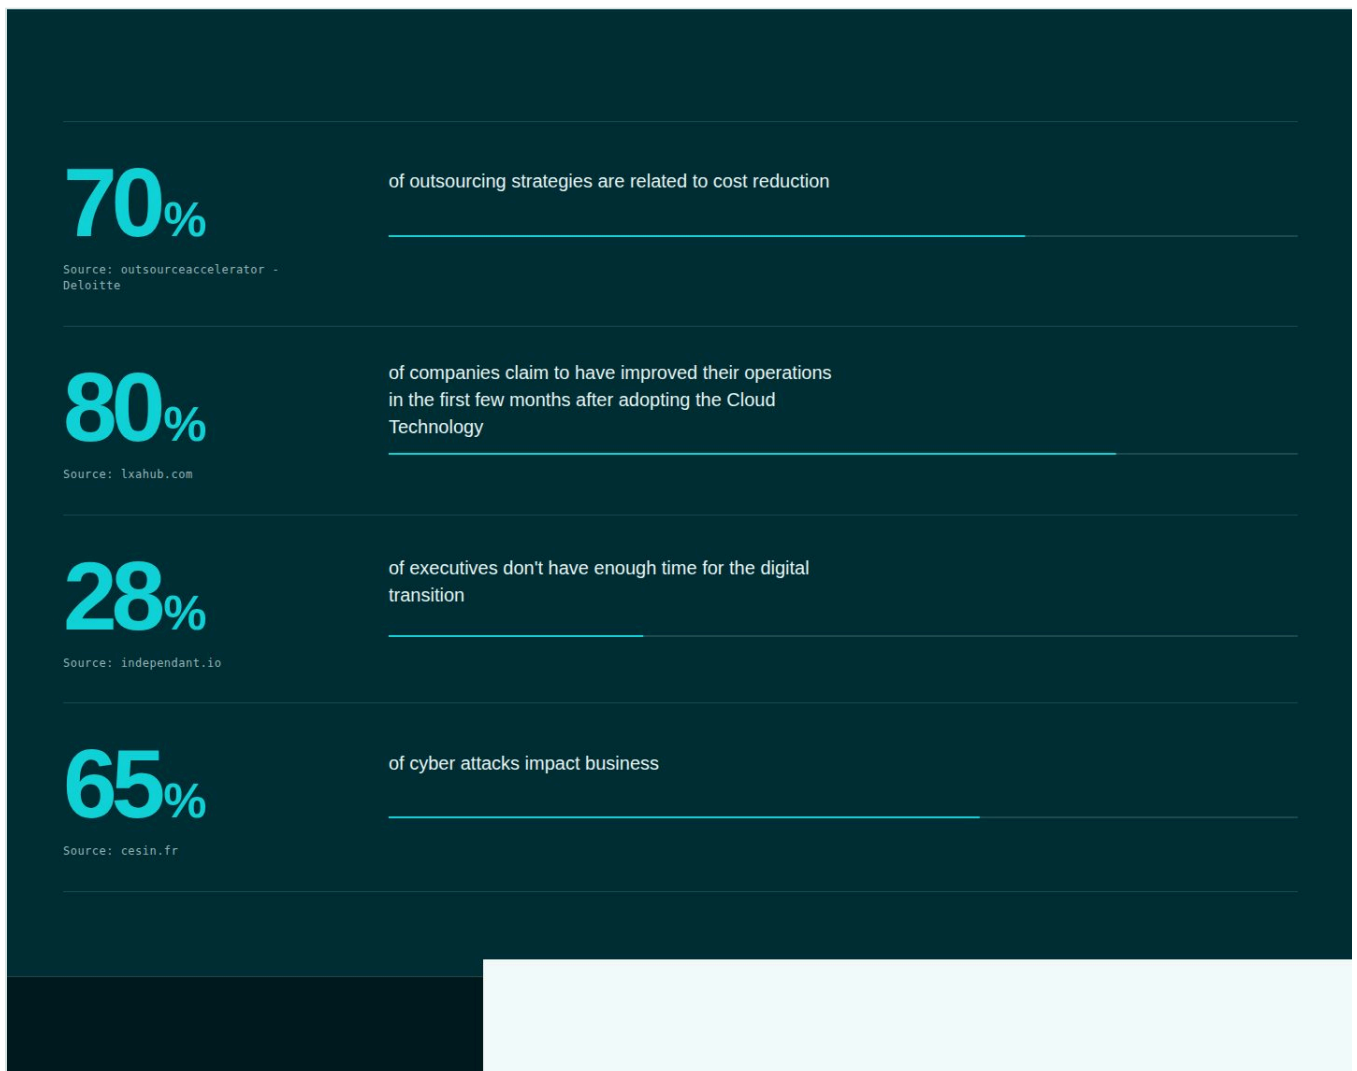

- Statistics are real text, each with a bar drawn to scale and its source.
- Each service has its own animated line drawing, made in code.
- No photos are needed on the homepage.

Why it is better. Figures can be read aloud, translated and indexed. Drawings explain each service, stay sharp on any screen and add very little to the page size.

Current site — Homepage → statistics, desktop.

Redesign — index.html → statistics band: text, bars to scale, sources.

UI-6 · Responsiveness

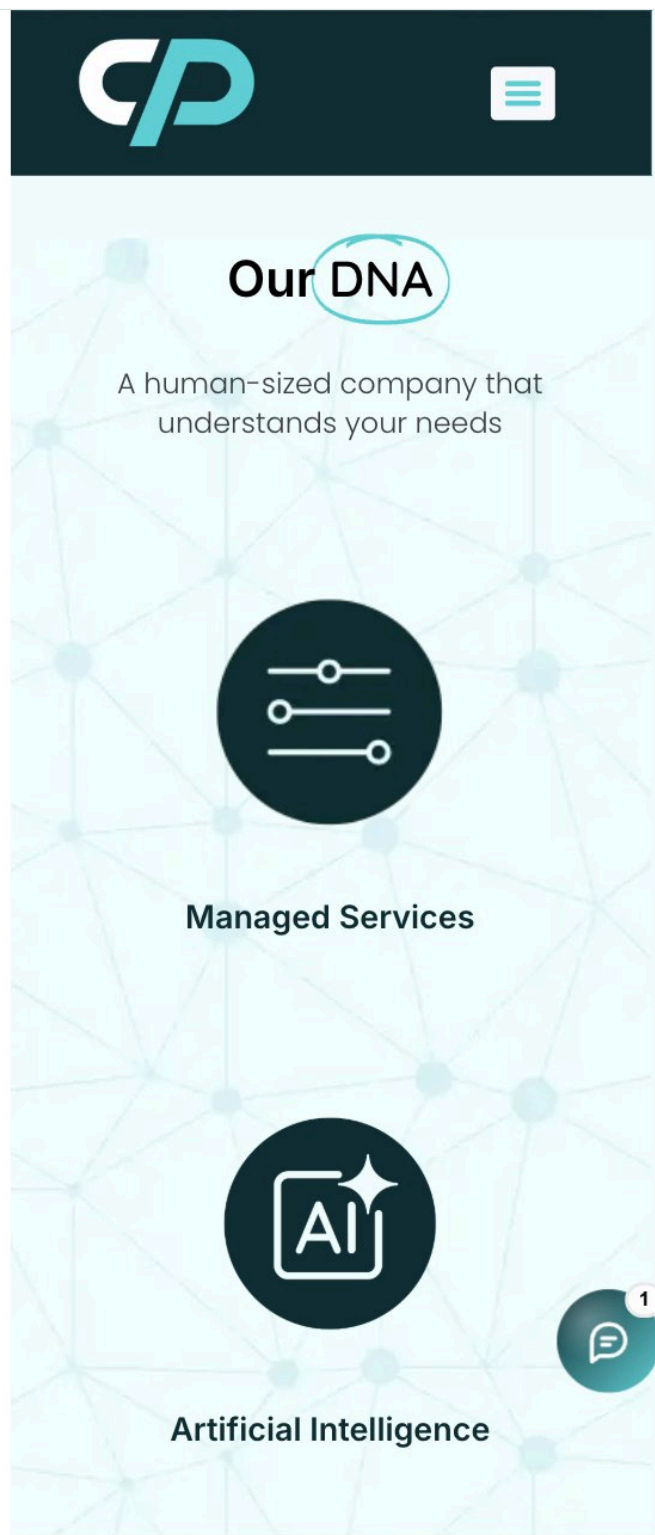

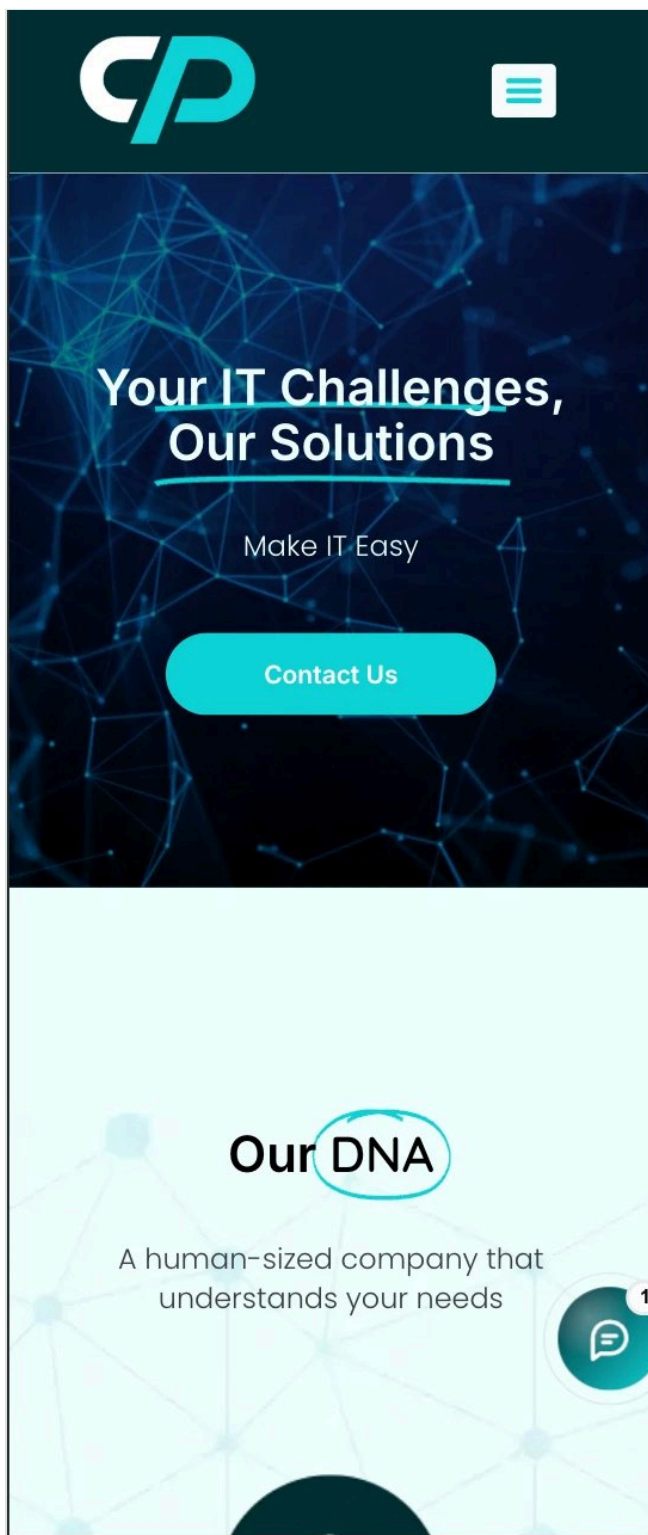

Current site (390 px).

- The homepage is 8,668 px tall, about 10 screens.
- Each service takes most of a screen.
- 13 tap targets under 24 px on the homepage, 20 on Contact.

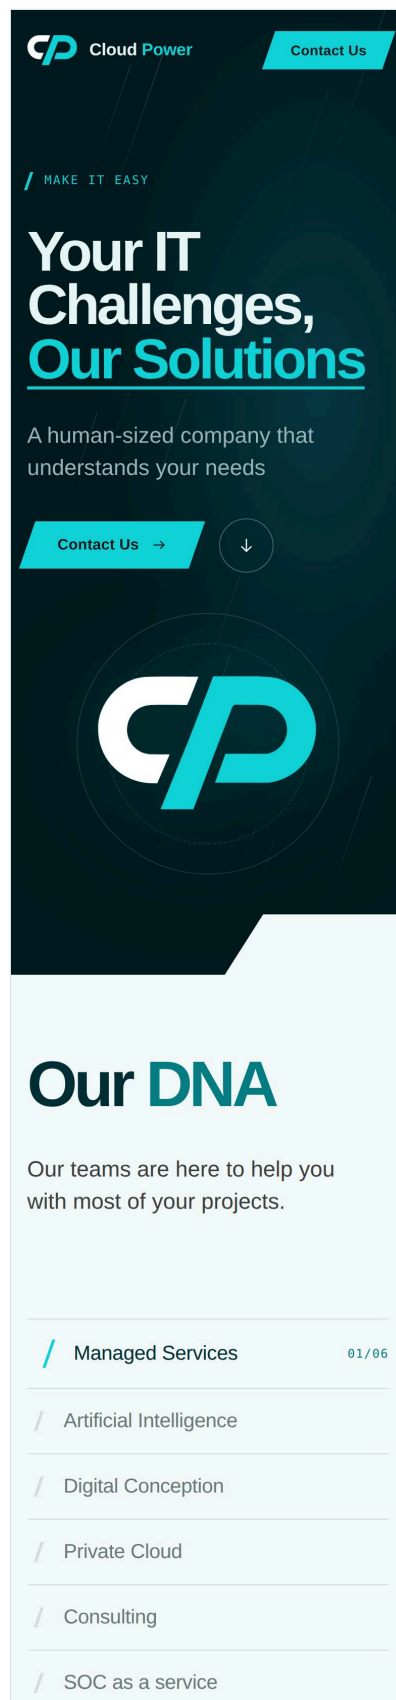

Redesign (under 900 px).

- A single column with 16 px margins.
- Title sizes scale smoothly.
- Statistics, values and steps stack.
- The Contact Us button is in the header.

Why it is better. The page stays readable and the main action is easy to reach. Every page now fits a 390 px screen; the mobile menu still needs to be added (O-1).

Redesign — index.html, phone (390 px), first 2 screens.

UI-7 · Motion

Current site.

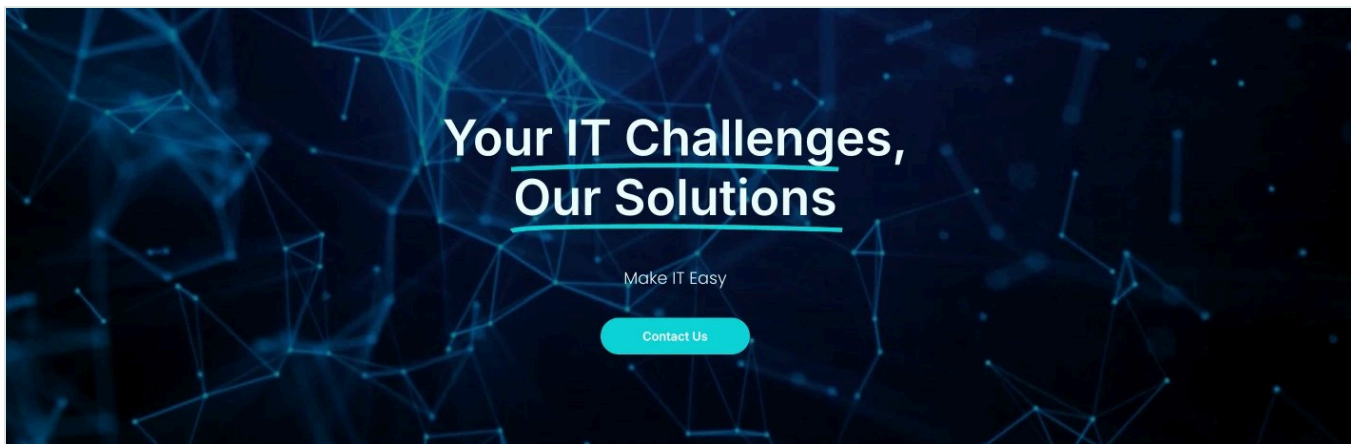

- 21 elements fade in.
- Two headings have a marker that repeats every 8 seconds.
- Get Answers is a slider that moves every 5 seconds.

Redesign.

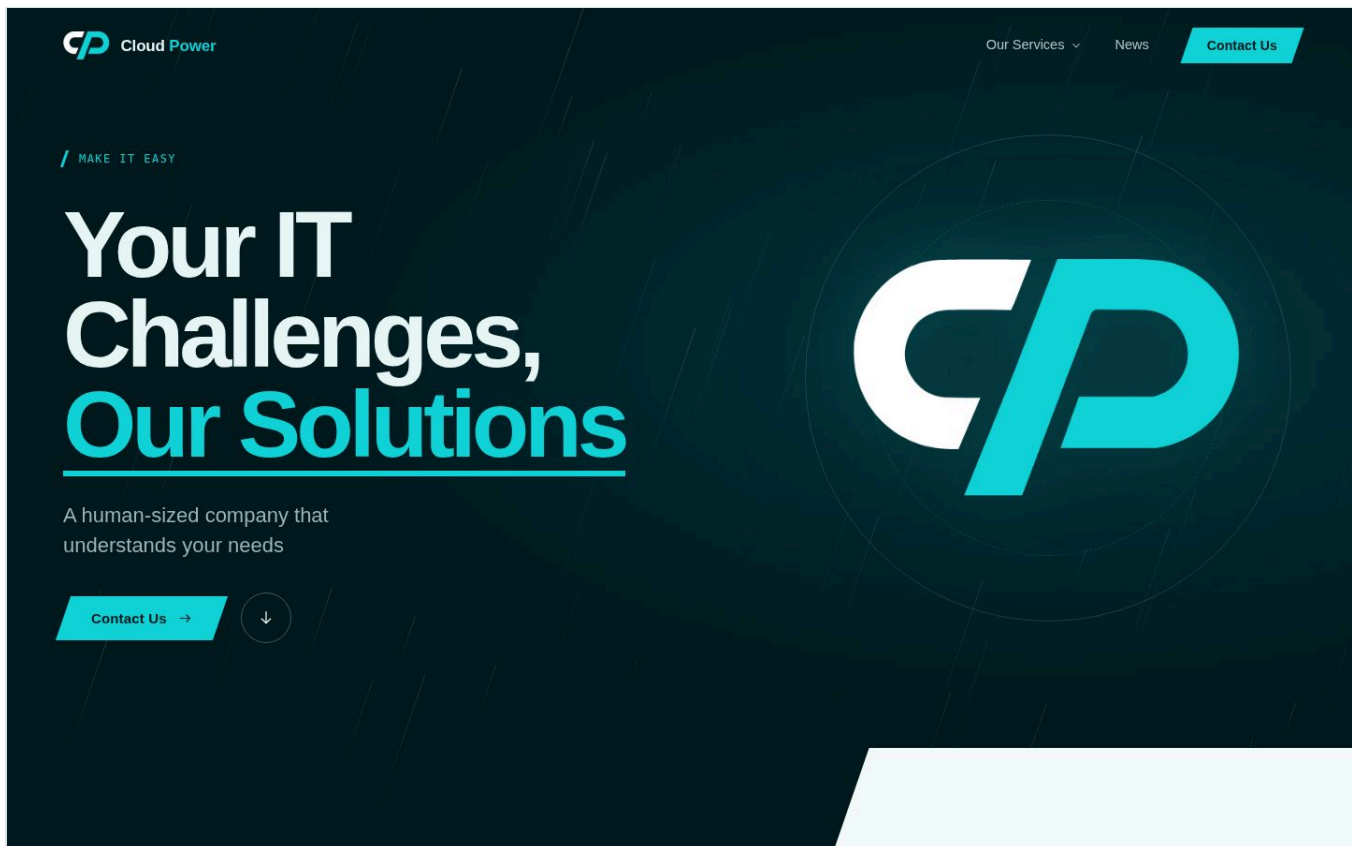

- Hero: streaks at the logo angle that glow near the cursor, and a logo that tilts toward it.
- The DNA index follows the scroll.
- Numbers count up once.
- Animations switch off when “reduce motion” is set on the device.

Why it is better. Motion responds to the visitor instead of pulling attention. Removing the auto-slider lets people read at their own pace (WCAG 2.2.2 and 2.3.3).

Current site — Homepage → hero with the drawn marker on “Our Solutions”, desktop.

Redesign — index.html → hero with the streaks and the logo, desktop.

UX (User Experience)

UX-1 • Purpose clarity

Current site. The first screen shows the slogan “Your IT Challenges, Our Solutions” and “Make IT Easy”. The positioning line “A human-sized company that understands your needs” sits further down, under Our DNA.

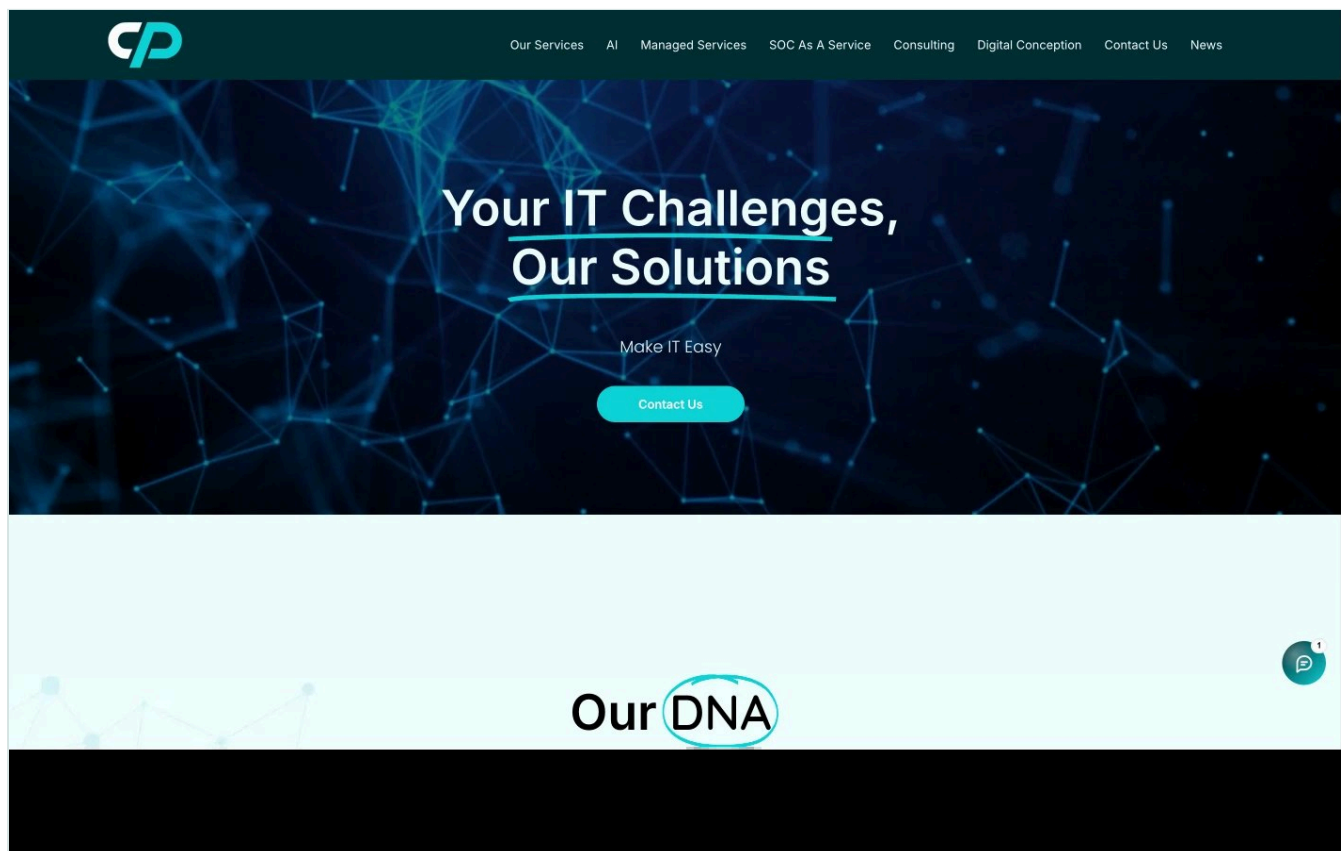

Redesign. The first screen holds three things:

- the slogan as the page’s one H1;
- “A human-sized company that understands your needs” directly under it;
- one Contact Us button.

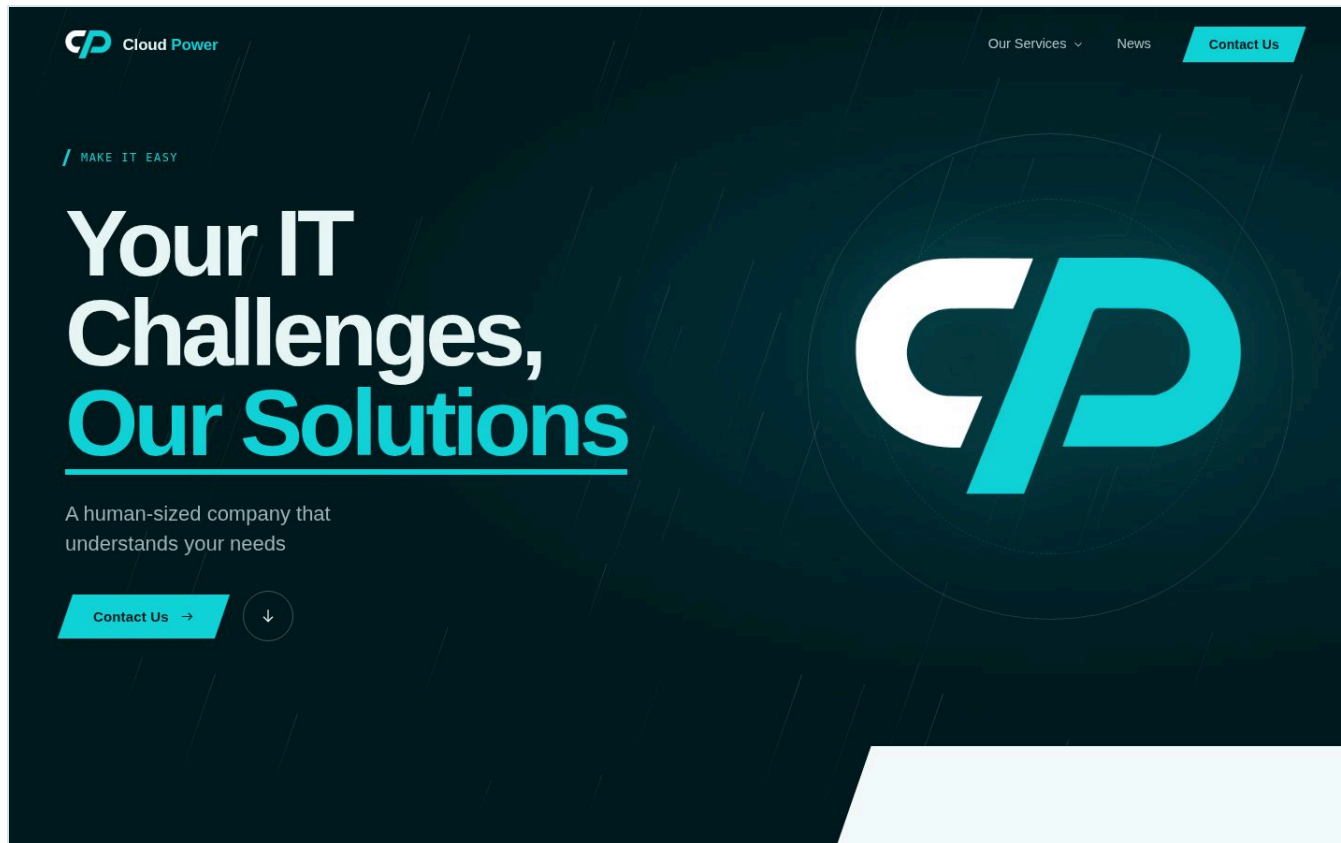

The Cloud Power logo sits on the right, with animated light streaks at the logo’s angle.

Why it is better. The first three things a visitor reads answer “who”, “what kind of partner” and “what next”. A line naming the services and the audience (SMEs in Luxembourg) can be added once Cloud Power approves the wording.

Current site — Homepage, first screen only, desktop 1440 × 900.

Redesign — index.html, first screen only, desktop 1440 × 900.

UX-2 · Navigation

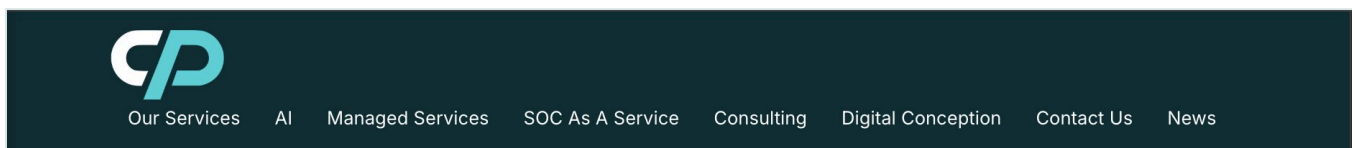

Current site. The menu has 8 equal links, including the overview page and its own sub-pages, and Contact Us looks like any link.

Redesign.

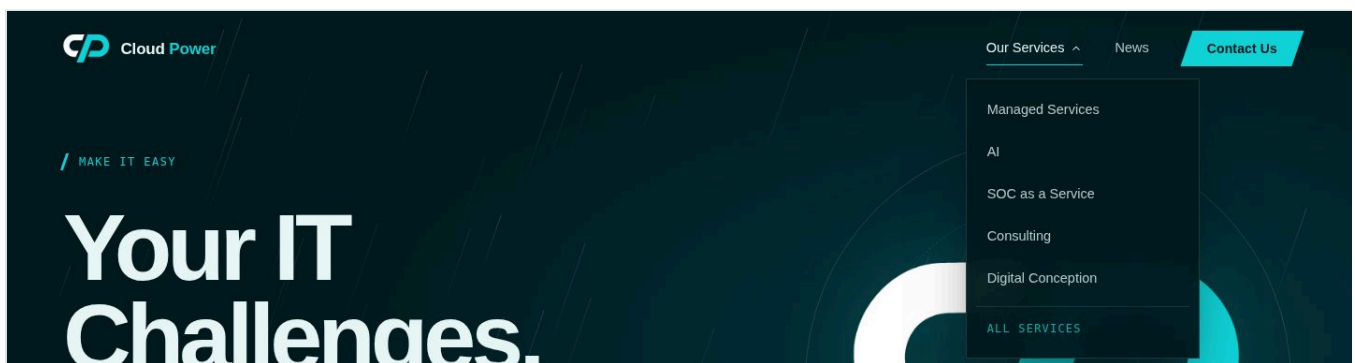

- “Our Services ▼” opens the five service pages and “All services”.
- News stays a plain link, and Contact Us is the one filled button.
- The header turns solid on scroll, hides while scrolling down and returns on scroll up.

Why it is better. The navigation groups eight links into three main choices and gives Contact Us greater visual prominence.

Current site — Header bar: 8 equal links, desktop.

Redesign — index.html → header with the Our Services menu open, desktop.

UX-3 · Content and repetition

Current site.

- SOC is described on its own page, on Managed Services and in the homepage FAQ.
- “65% of cyber attacks impact business” appears 4 times.
- “Technology is simple with people you can trust” is on two pages.
- FAQ answers are always open, one of them five paragraphs long.

Redesign.

- Each topic has one home. Managed Services links to SOC in one row instead of repeating it.
- The 65% figure stays on the homepage and once on the SOC page.
- The FAQ is an accordion with the same answers.

Why it is better. Shorter pages, each saying something new. One page per topic also gives search engines a clear page to rank.

Current site — Managed Services page → the SOC block that repeats the SOC page.

What is Soc as a Service ?

In today's digital landscape, the Security Operations Center (SOC) has become an essential ally for organizations looking to protect their most valuable assets. More than just a monitoring tool, the SOC acts as an operational extension of internal teams — offering real-time visibility, advanced threat detection, and rapid incident response.

Its mission: to anticipate, detect, and respond to cyber threats. By understanding both current and emerging risks, the SOC helps secure business, personal, and confidential data — preserving trust and reputation across all stakeholders.

Far from being reactive, the modern SOC adopts a proactive posture. Security professionals no longer wait for incidents to occur — they prepare for them, knowing that cyberattacks are inevitable.

Combining innovative technologies with expert analysis, the SOC continuously evolves to match the sophistication of modern threats. From advanced phishing campaigns to stealth intrusions, today's attacks demand intelligent, adaptive defenses — and the SOC delivers exactly that.

A cornerstone of business resilience, the SOC ensures not only protection but continuity — keeping systems running, data safe, and organizations one step ahead.

EXPLORE OUR SOC SOLUTIONS AND FIND THE RIGHT FIT FOR YOUR ORGANIZATION

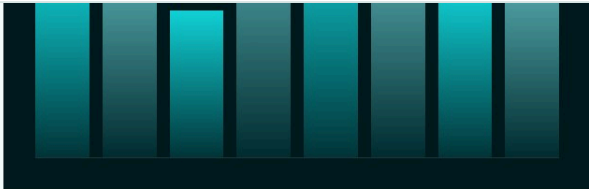

Redesign — managed-services.html → end of the page. Red frame: the whole SOC block is now one link to the SOC page, instead of five paragraphs repeated from it.

→ Application Performance Monitoring

→ Infrastructure Usage Optimization

→ Resources Management

→ Costs clarity & Accurate Dashboarding

/ MANAGED SERVICES

SOC as a Service

/ SOC as a Service

/ Consulting

/ Digital Conception

UX-4 · Load speed

Current site (Lighthouse, mobile):

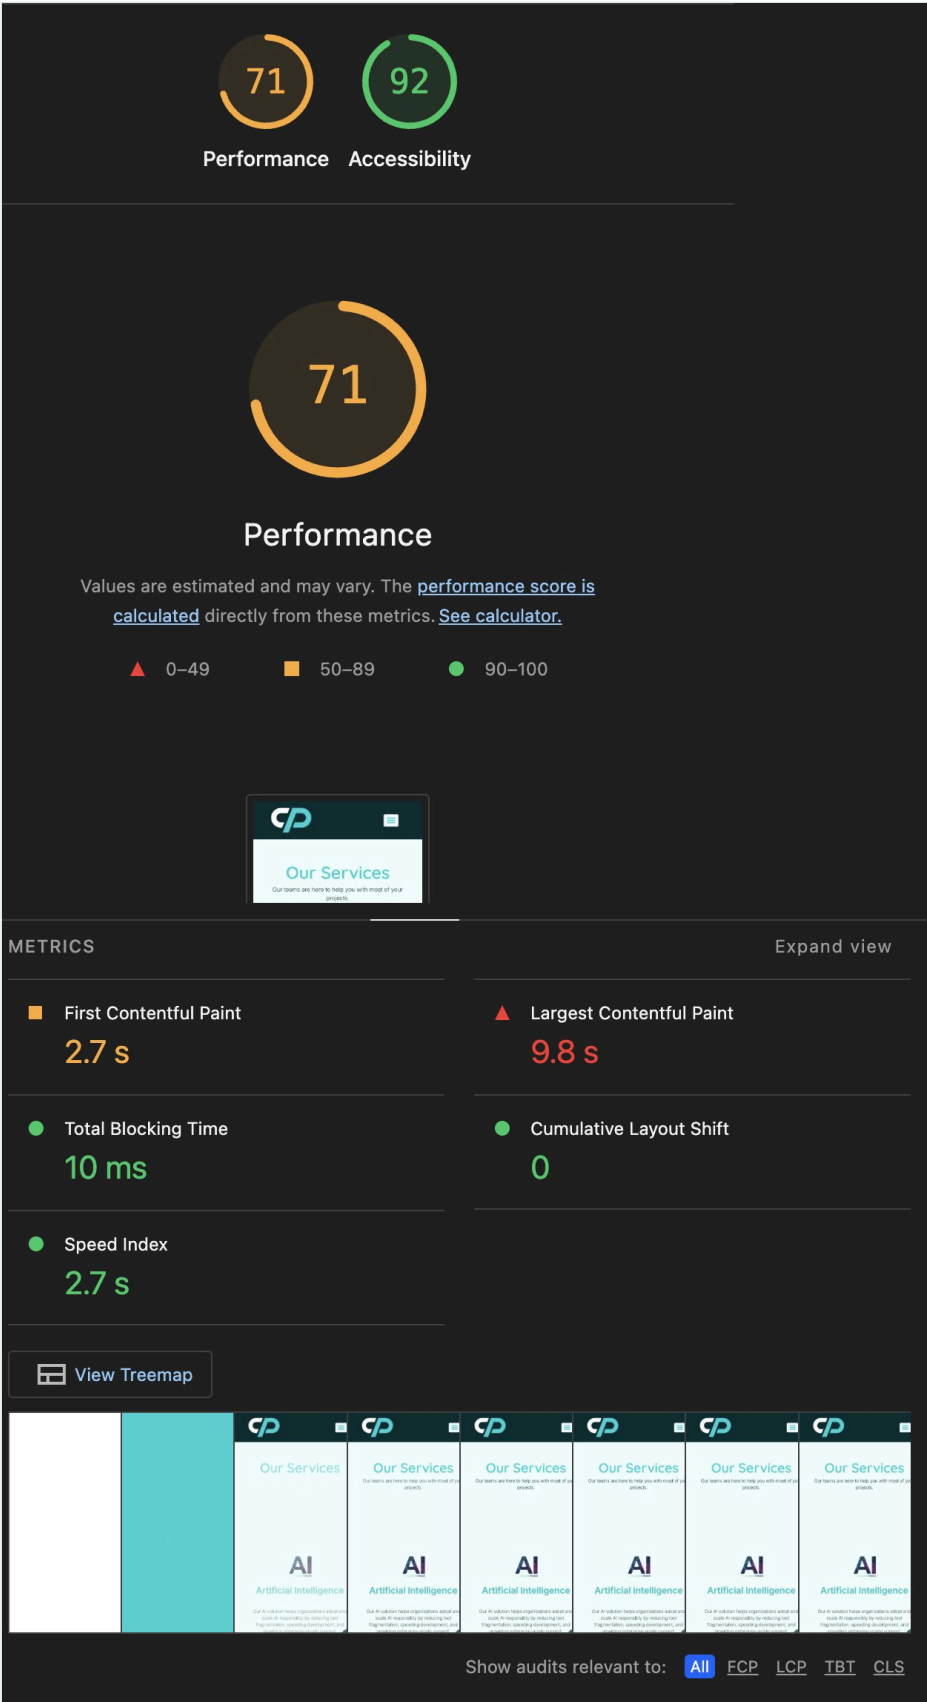

- Performance 68–78.
- LCP 3.1–5.6 s, and 9.8 s on Our Services in a repeat run; the target is 2.5 s.
- About 1.6 s of render-blocking files.
- No cache headers on static files.

Redesign (Lighthouse, mobile, design files):

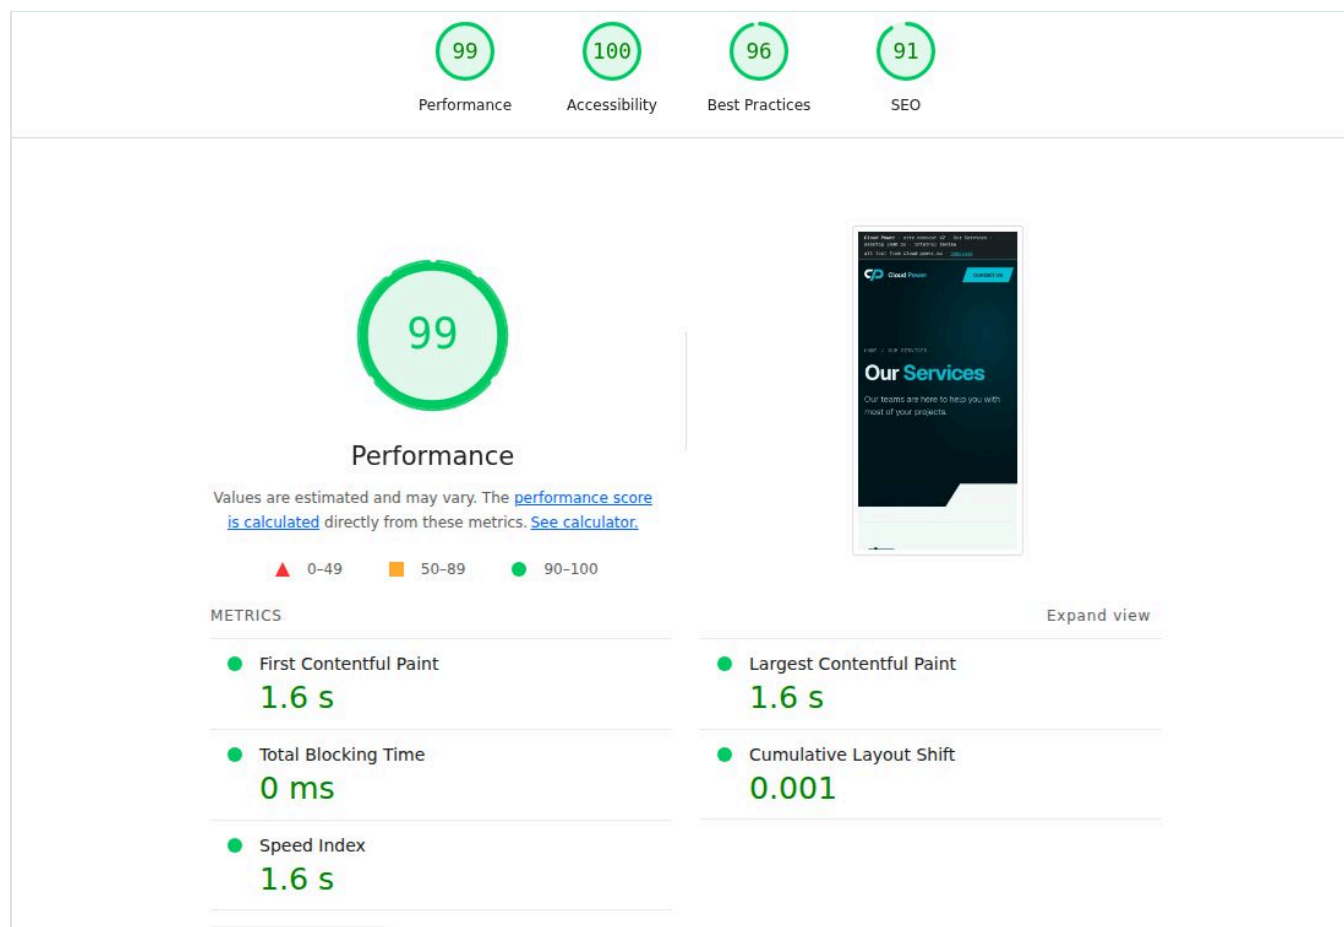

Page	Current Performance	Redesign Performance	Current LCP	Redesign LCP	Redesign CLS	Redesign page size
Home	73	91 (median of 3 runs)	4.5 s	2.8 s	0.001	126 KB
Our Services	71	99	5.6 s	1.6 s	0.001	92 KB
Managed Services	68	99	4.7 s	1.8 s	0.001	191 KB
AI	75	94	4.6 s	3.0 s	0.005	412 KB
SOC as a Service	78	99	3.1 s	1.8 s	0.004	167 KB
Contact Us	77	99	3.7 s	1.6 s	0.005	89 KB

The redesign has no photos or videos on the homepage, uses one main font family (with Geist Mono for small labels) instead of four families, and has no page builder or jQuery.

Why it is better. All six measured pages are faster, pages are 2–7 times lighter, and content does not jump while loading (CLS ≤ 0.005). The homepage needs one more fix: its animated hero keeps LCP at 2.8 s (target 2.5 s) and keeps the processor busy, about 5.8 s of script work on a throttled phone; in one of three runs this blocked the page for 920 ms (O-3). The homepage was measured with its viewport tag in place. The design files were served locally, so real server times will add to all numbers; the order of improvement is reliable.

Redesign — Lighthouse, our-services.html, mobile: Performance 99, LCP 1.6 s.

UX-5 · Trust

Current site.

- /our-story/ is public. It is an unedited template with "A Brief Heading", "Benefit 1-4", "Client Name" testimonials and empty image frames.
- /sample-page/ is the WordPress default page.
- "Since January 2017" is hidden in the last sentence of About.

Redesign.

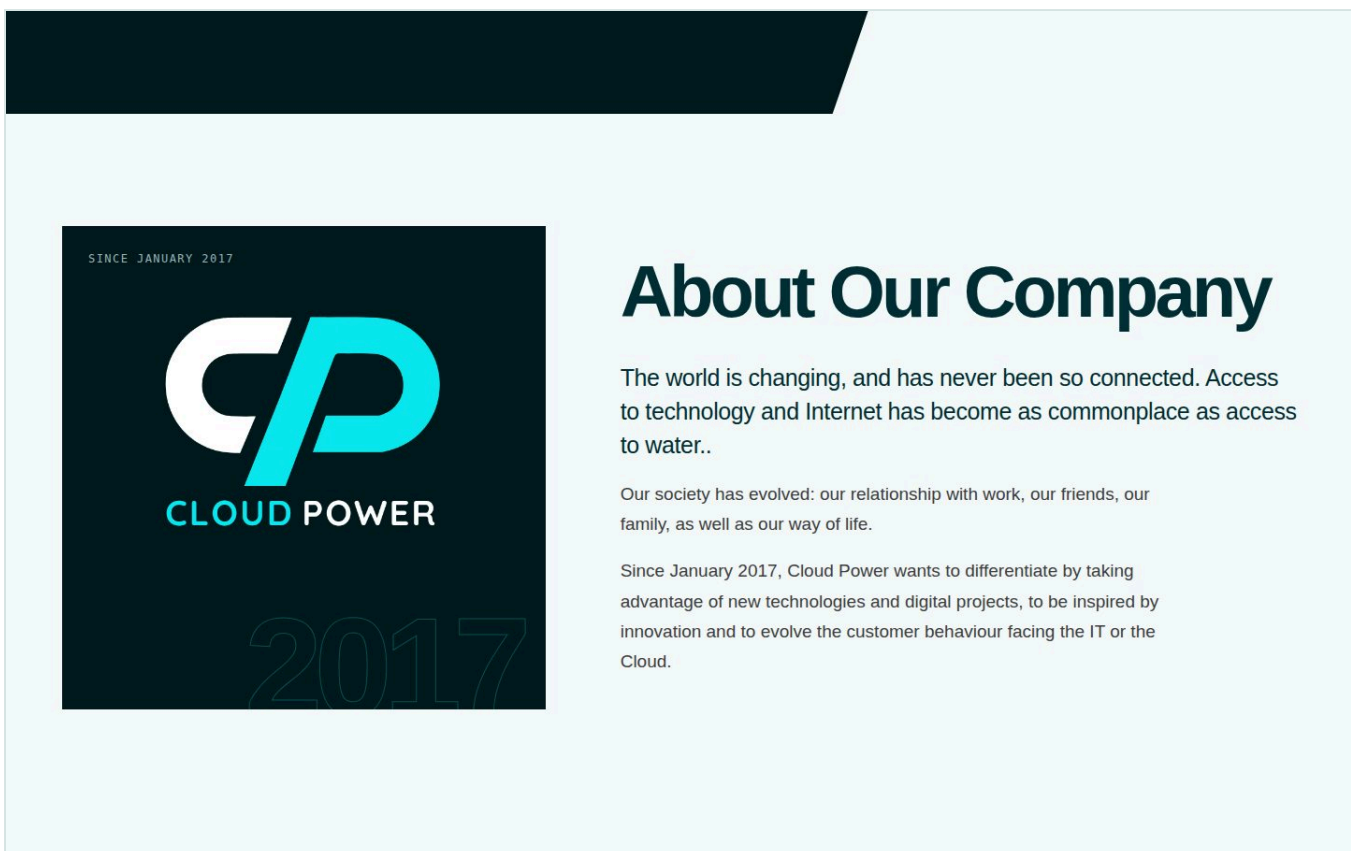

- The template pages are removed from the plan, and BaaS is merged into Managed Services.
- About shows "Since January 2017" as a caption and a large outlined "2017".
- The four values in Why Choose get a dark section of their own.

Why it is better. Nothing unfinished is visible, and the company's experience is readable in a second.

Current site — Homepage → About Our Company, desktop: “Since January 2017” is the last sentence of a long paragraph.

Redesign — index.html → About with “Since January 2017”, desktop.

UX-6 · Accessibility

Current site.

- Contrast failures (UI-1).
- 4 H1s on the homepage, and none on Contact, Digital Conception, News or BaaS.
- Links named “Click Here”.
- An invalid ARIA role on the background video.

Redesign.

- One H1 per page.
- The FAQ uses real buttons with an “expanded” state.
- A visible focus ring on links and buttons.
- Labelled form fields and “reduce motion” support.

Why it is better. Visible focus states, labelled fields and semantic controls improve keyboard and screen-reader access. The remaining colour fixes and manual accessibility checks are needed before confirming WCAG 2.2 AA conformance.

92

Accessibility

These checks highlight opportunities to [improve the accessibility of your web app](#). Automatic detection can only detect a subset of issues and does not guarantee the accessibility of your web app, so [manual testing](#) is also encouraged.

CONTRAST

▲ Background and foreground colors do not have a sufficient contrast ratio.

These are opportunities to improve the legibility of your content.

NAMES AND LABELS

▲ Skip links are not focusable.

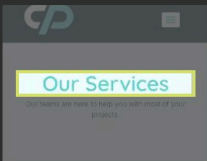

These are opportunities to improve the semantics of the controls in your application. This may enhance the experience for users of assistive technology, like a screen reader.

CONTRAST

▲ Background and foreground colors do not have a sufficient contrast ratio.

Low-contrast text is difficult or impossible for many users to read. [Learn how to provide sufficient color contrast](#).

Cloud Power · UX and UI audit

25 / 39

Redesign — Lighthouse, our-services.html, mobile → Accessibility 100 with no contrast failures reported on this page. This is an automated check, not a full WCAG review.

Accessibility

These checks highlight opportunities to [improve the accessibility of your web app](#). Automatic detection can only detect a subset of issues and does not guarantee the accessibility of your web app, so [manual testing](#) is also encouraged.

UX-7 · Section order

Current site. The order is Hero → Our DNA → Statistics → **Get Answers** → Why Choose → About → FAQ. The main contact block comes before the reasons to trust.

Redesign. The order is Hero → Our DNA → Statistics → Why Choose → About → FAQ → **Get Answers**. Each section answers the next question a visitor has, and the page ends with one action.

Why it is better. Trust comes before the request, so the people who reach the contact block are better informed.

Cloud Power · UX and UI audit

Redesign — index.html, full page, desktop: Get Answers closes the page.

Conversion

CV-1 · Calls to action

Current site. The homepage asks for contact 9 times, with 5 labels: Contact Us ×3, Schedule An Appointment, Schedule an Appointment + Click Here ×3 in the slider, Feel Free To Contact Us. There are also two different booking links: /book/... on the homepage, /appointment/... on AI and SOC.

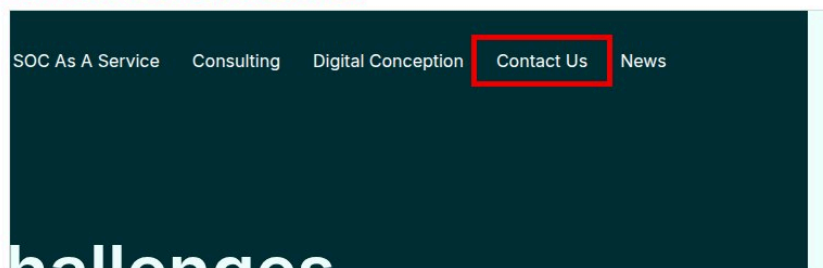

Redesign.

- One label, "Contact Us", in three places: the header (visible at the top and whenever the visitor scrolls up), the hero (for visitors ready now) and Get Answers at the end of the page (for visitors who read everything).
- One destination: the Contact page, which also holds the only booking link.

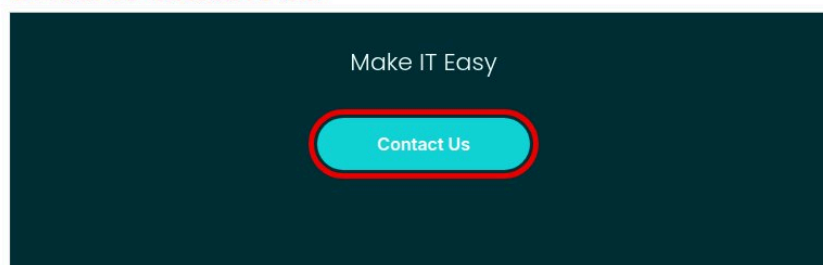

Why it is better. The action is easy to find without being repeated until it becomes noise. One destination makes enquiries easier to track and keeps the sales calendar in one place.

Current site — Homepage, desktop: the 5 visible contact actions, each cut out with its section (2 more sit on the hidden slider slides).

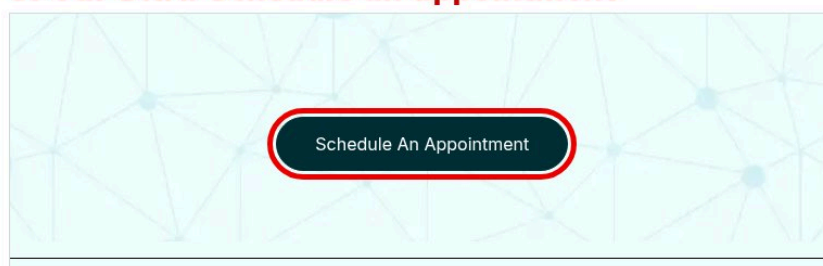

1. Header: Contact Us

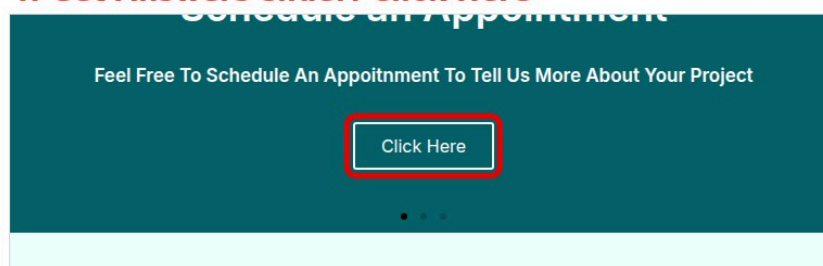

2. Hero: Contact Us

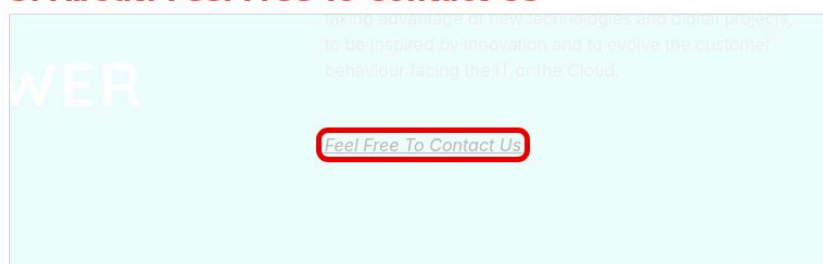

3. Our DNA: Schedule an appointment

4. Get Answers slider: Click Here

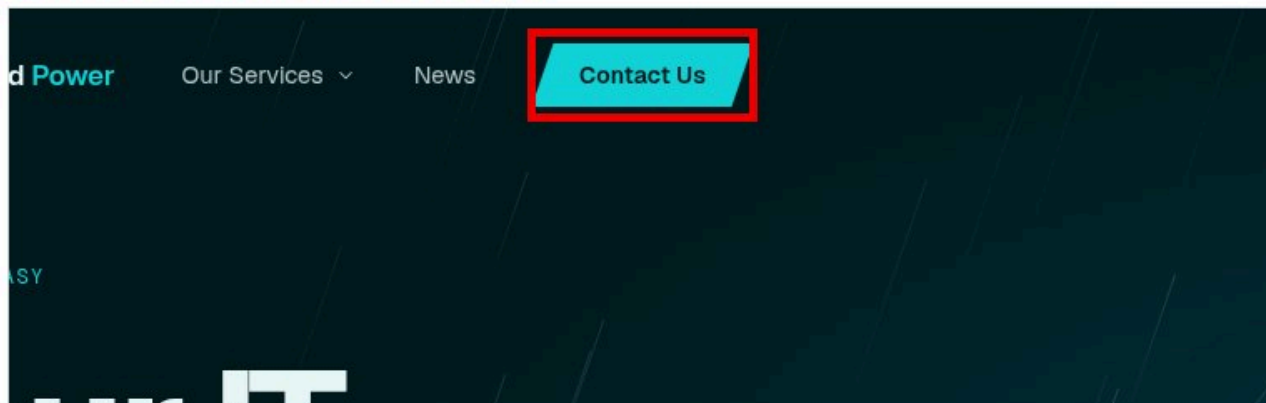

5. About: Feel Free To Contact Us

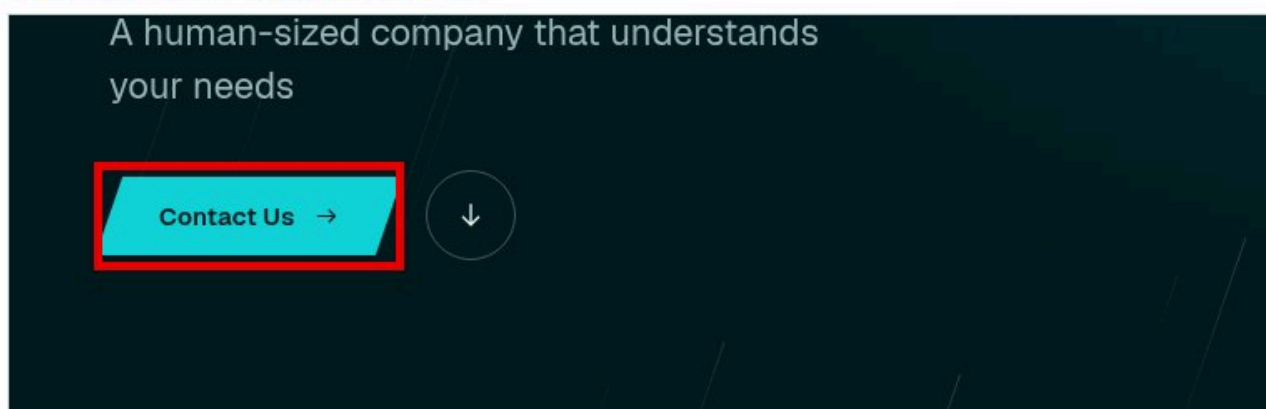

Redesign — index.html, desktop: the 3 Contact Us buttons, each cut out with its section.

1. Header: Contact Us

2. Hero: Contact Us

3. Get Answers: Contact Us

CV-2 · Value proposition per service

Current site. Services are names only on the homepage. Our Services repeats "Discover Our Solution" 8 times.

Redesign.

- Each service on the homepage shows its own one-line promise from its page, for example "Free yourself from specific tasks. We can take them off your hands.", plus its sub-offers as tags.
- Our Services is an index of rows, each with a summary and an arrow to its page.

Why it is better. Visitors see what each service does for them before clicking, and each link names its target.

Current site — Our Services page, first 4 services, desktop: the same “Discover Our Solution” button under each.

Discover Our Solution

Cloud Power · UX and UI audit

33 / 39

Redesign — our-services.html, first 3 rows, desktop.

CV-3 · Contact form

Current site. The Contact page form is short and labelled. Five service pages embed a second form system (WPForms), with one unlabelled field and a 1.85:1 "Send" button.

Redesign. One form, on the Contact page only:

- Name, E-mail, Phone (optional), Message, each with a visible label;
- the address, opening hours, phone, e-mail and LinkedIn next to it;
- the one booking link.

Service pages end with a single "Contact Us" block.

Why it is better. One inbox to watch, one place to maintain, and a visible label on every field.

[Schedule an appointment →](#)

NAME

EMAIL

PHONE

MESSAGE

[Send →](#)

CV-4 · Social proof

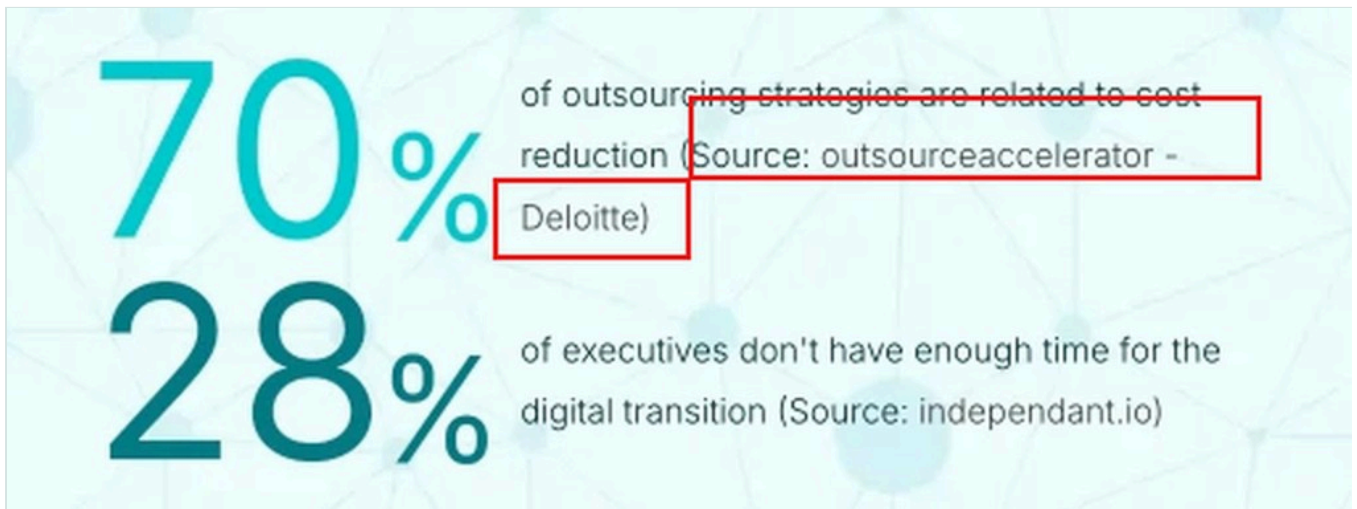

Current site. The four homepage figures are third-party market statistics. There are no client logos, testimonials or case studies, and the founding year is hidden.

Redesign.

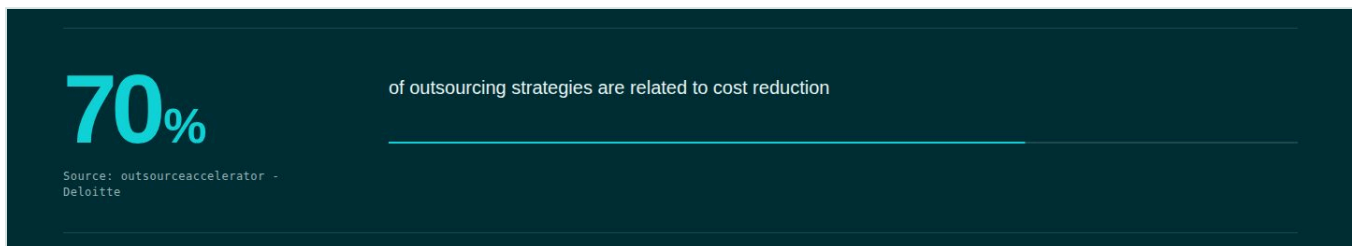

- The figures are kept, each with its source shown under it.
- "Since January 2017" is highlighted.
- Client logos and case studies can be added once Cloud Power provides approved material (O-4).

Why it is better. Sources make the figures credible, and the company's age becomes visible. Real client proof stays the strongest next step.

Current site — Homepage → statistics. Red frame: a source in small grey text.

Redesign — index.html → one statistic with its bar and source.

CV-5 · First step

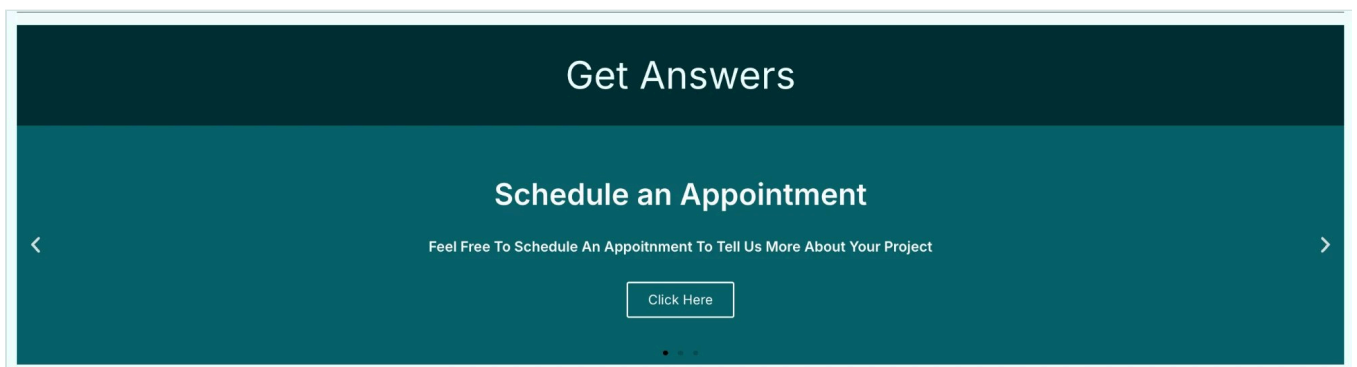

Current site. The Get Answers slider describes the process in three slides, but shows only one at a time, every 5 seconds.

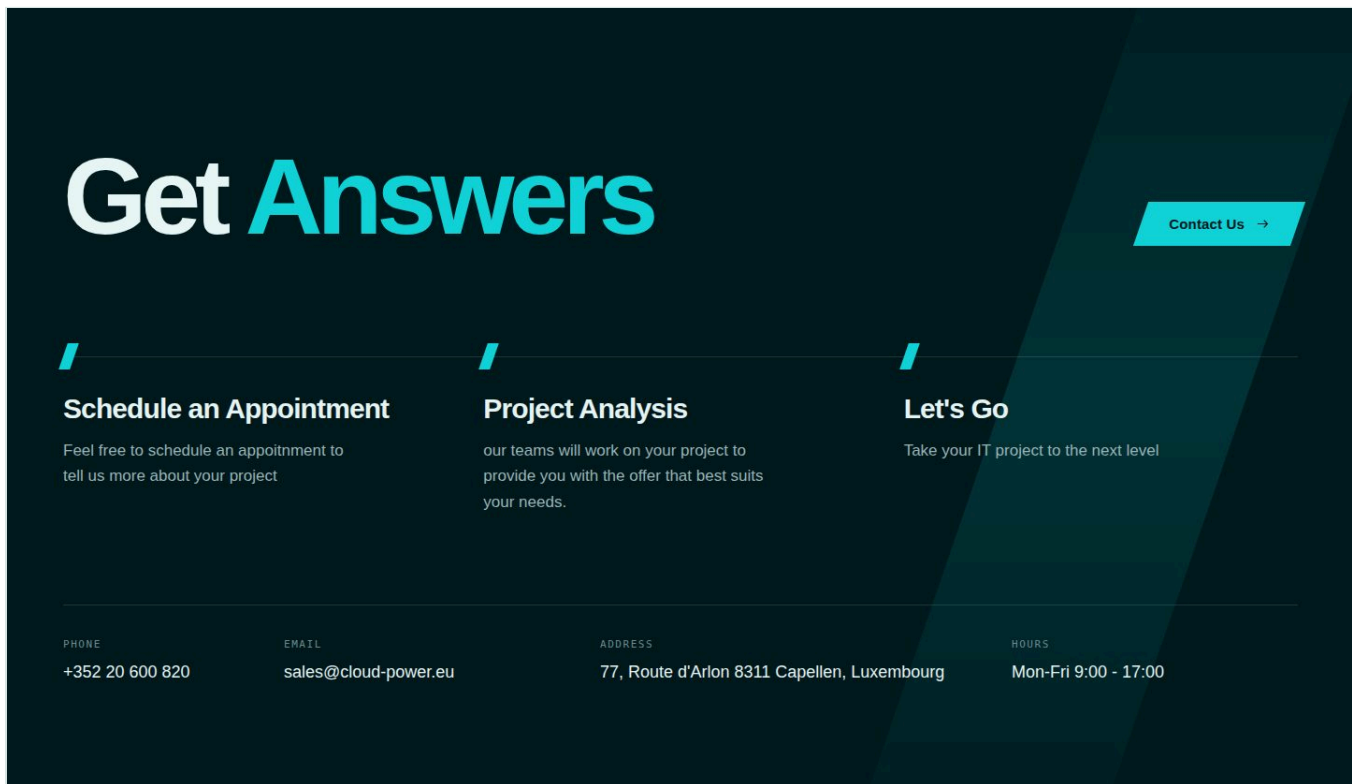

Redesign.

- Get Answers shows the whole path at once: Schedule an Appointment → Project Analysis → Let's Go.
- The phone, e-mail, address and hours sit directly under it.

Why it is better. Visitors see what happens after they get in touch, which lowers the barrier to the first contact.

Current site — Homepage → Get Answers slider: one step at a time.

Conclusion

What was wrong?

The current cloud-power.eu has good content, but it is hard to use. Light cyan text and buttons are hard to read, and four fonts and five button styles make the site look inconsistent. On the homepage, services are only icons with names, so visitors cannot tell them apart. Visitors meet nine different contact links, two booking links and two contact forms. Some texts repeat across pages, unfinished template pages are public, and pages load slowly on phones.

What the redesign changes

One colour palette with stronger contrast, one main font family with Geist Mono for small labels, and one consistent button system. Each service shows what it does. There is one "Contact Us" action and one form. Pages are lighter and load faster on phones.

Next steps

Finish the mobile version (O-1)

- Add a menu button for phones with Our Services and News. The current site has one, so the redesign should not launch without it.

Fix the last two colours (O-2)

- Make the small grey text darker (#5A686B).

- Use bright cyan (#12D3D8) for links on dark backgrounds.

Speed up the homepage (O-3)

- Start the hero animation after the page appears.
- Draw fewer light streaks on phones, and pause the animation when the tab is hidden.

Build trust (O-4)

- Add approved client logos and 2–3 short case studies.

Finish the build (O-5)

- Add a meta description to every page.
- Fix the spelling copied from the live site: "appoitnment" (correct: "appointment"), "Environnement" ("Environment" in English text), "Soc as a Service" ("SOC as a Service"), and "access to water.." ("access to water.").
