PREPARED FOR PEDRO

Mini UX, UI, Marketing & Conversion Audit

Cloud Power Luxembourg | www.cloud-power.eu

Purpose: identify the website issues that may reduce visitor trust, lead generation, advertising effectiveness and sales enquiries - with evidence from the October 2026 audit snapshot.

1.86:1	~8,700 px	53/100
BUTTON TEXT CONTRAST	MOBILE HOME LENGTH	MOBILE PERFORMANCE

EXECUTIVE VIEW

- Strong IT service coverage, but the homepage communicates technologies more clearly than customer outcomes.
- Visible friction: low contrast, inconsistent calls to action, two different contact forms and placeholder content.
- Commercial proof and measurement need attention: case studies, contact journeys, SEO metadata and GA4/Ads verification.

Scope: public website pages, screenshot evidence, one PageSpeed Insights run and observed search results. **Not included:** GA4/Ads account access, server logs, consent-platform settings, CRM lead data or a legal compliance audit. Findings describe a snapshot; platform metrics and search displays can vary.

01 / UI

Clarity, contrast & consistency

Design issues that interfere with readability and make the next action harder to recognise.

Colour and contrast

OBSERVATION

The recorded turquoise button (#12D3D6) with white text measures **1.86:1**, below the **4.5:1** WCAG AA minimum for normal text. Turquoise page titles on a pale mint background were measured around **1.8:1**.

IMPROVEMENT

Keep turquoise as an accent but use dark teal (#002F35) for text. The recorded dark-teal-on-turquoise comparison reaches **7.76:1**. Recheck all buttons, headings and focus states.

Contact Us

FAIL 1.86:1

Contact Us

PASS 7.76:1

Typography, copy and buttons

AUDIT EVIDENCE

The broader review recorded **4 font families** and at least **9 button variations**. Visible copy issues include “More Informations”, “Virtual Desktop Environnement”, “Coud Power” and “appoitnment”.

IMPROVEMENT

Standardise the type scale and use one primary and one secondary button. Proofread interface copy, page titles and metadata. Use action labels that tell the visitor what will happen next.

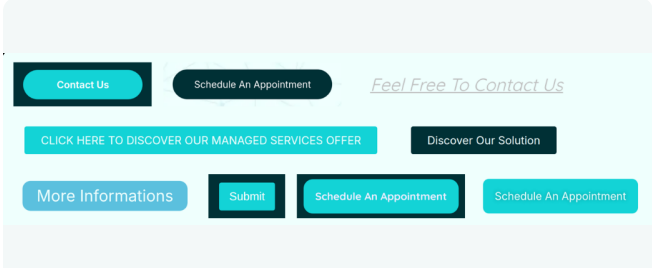

Mobile page length

AUDIT EVIDENCE

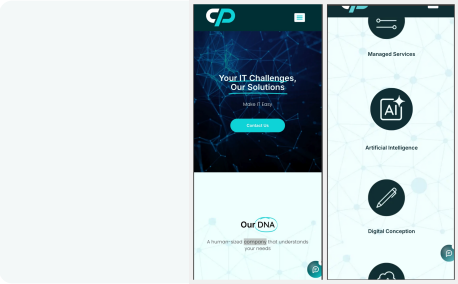

The recorded homepage extends to approximately **8,700 px** on a phone; six service icons stack vertically and delay access to trust signals or useful conversion content.

IMPROVEMENT

Move the main CTA and proof higher. Use compact mobile cards or a 2-column layout where readable, reduce repeated descriptions and test key mobile breakpoints.

Nine observed CTA styles and labels across key pages.

Mobile homepage: long, vertically stacked service area.

02 / UX

Clearer journey, faster pages

The site should answer what Cloud Power solves, why it is credible and how to get in touch.

Positioning and hero

OBSERVATION

The homepage opens with **“Your IT Challenges, Our Solutions”** and **“Make IT Easy”**: memorable but not distinctive enough to explain the target customer or business outcome.

IMPROVEMENT

Test a clearer value proposition: **“Secure. Manage. Modernize Your IT.”** with a short Luxembourg-focused service explanation and primary CTA. *Proposed copy requires Cloud Power approval.*

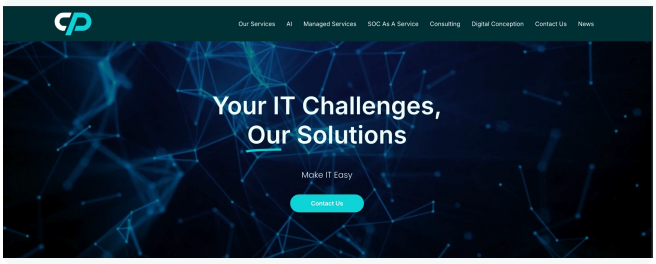

Navigation, footer and trust

OBSERVATION

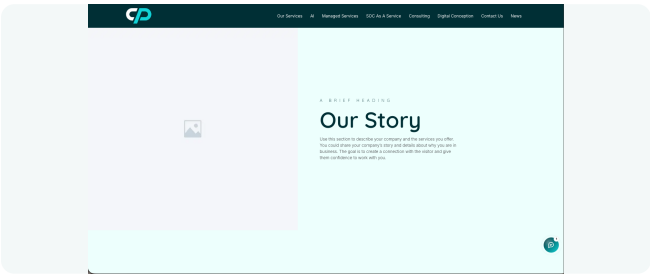

Eight header links carry similar emphasis and the recorded footer includes no direct contact information. The live **/our-story/** screenshot showed theme placeholder text; the audit also reports unfinished public template content.

IMPROVEMENT

Group services under one menu; promote “Talk to an IT Expert”; make phone, email and location easy to find. Finish or unpublish incomplete template pages. Put real client proof and verified credentials ahead of generic trust claims.

Generic hero: no explicit business outcome.

Our Story: visible template placeholder copy.

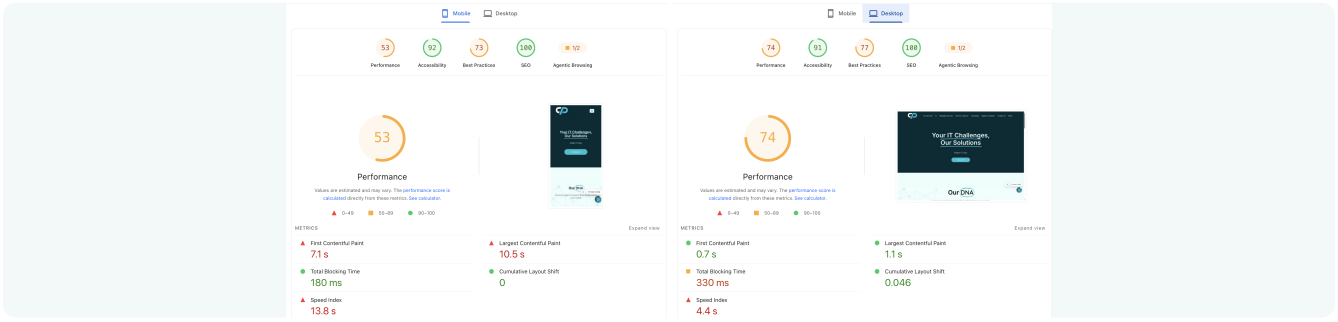

Mobile loading speed

OCTOBER 2026 SNAPSHOT

One captured Google PageSpeed Insights lab run scored **53/100 on mobile** (Largest Contentful Paint **10.5 s**), versus **74/100 on desktop** (LCP **1.1 s**). These are single-run lab results, not a permanent score.

IMPROVEMENT

Audit hero imagery and animation, compress assets, remove unused scripts, lazy-load below-the-fold media and retest with the same URL/settings over multiple runs. Prioritise real-user Core Web Vitals when available.

Google PageSpeed Insights capture: mobile 53 and desktop 74. Results fluctuate with test conditions.

03 / CONVERSION

Make enquiries easier to win

Reduce the distance between understanding an offer and taking a measurable next step.

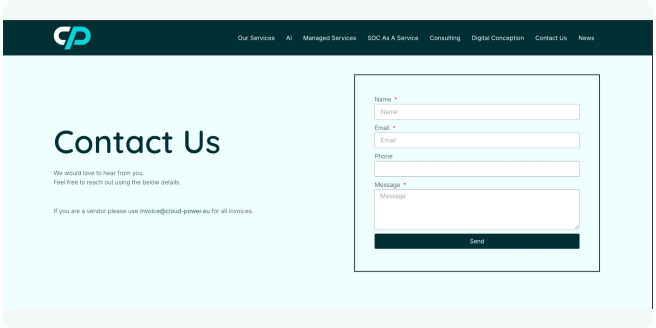

Forms and click-to-contact

OBSERVED INTERFACE

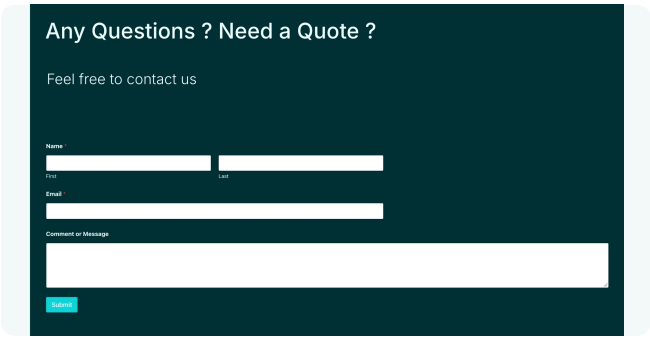

The snapshot shows **two different forms** (Contact Us versus service pages), with different fields and CTAs. The displayed phone number and sales email were observed as plain text rather than click-to-call/email links.

IMPROVEMENT

Use one accessible contact form pattern with an optional “I am interested in” selector. Make **tel:** and **mailto:** links functional; provide a short acknowledgement of what happens after submission.

Contact Us form: Name / Email / Phone / Message.

Service-page form: different fields and CTA.

Calls to action and evidence of expertise

OBSERVATION

Multiple “Contact Us”, “Click Here” and “More Info” buttons make next steps inconsistent. Third-party sector statistics do not prove what Cloud Power has delivered for clients.

IMPROVEMENT

Set one primary CTA (for example, “Talk to an IT Expert”), then service-specific actions. Build case studies around **challenge → solution → evidence of result → testimonial → CTA**. Use named client proof only with permission.

Advertising attribution and consent

REQUIRES ACCOUNT VALIDATION

The audit recorded Analytics/Ads tags and no visible cookie banner in the tested visit. However, **without GA4, Google Ads, Tag Manager and consent settings access, it is not possible to conclude that visits or enquiries are not being measured.**

IMPROVEMENT

Ask the account owner to verify consent implementation, Google Ads/GA4 linking, form-submit events, call clicks, booked meetings, consent-mode signals and test conversions. Review privacy/cookie requirements with the responsible person before changing tracking.

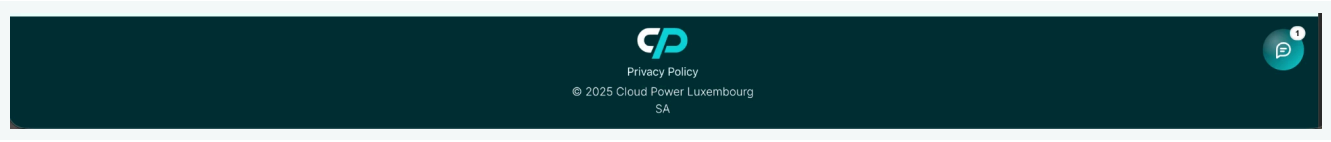

Footer and first steps

OBSERVED INTERFACE

The recorded footer shows only “Privacy Policy” and “© 2025”: no phone, email, address or LinkedIn. The journey also assumes visitors are ready to call or write; there is no lighter step for those still comparing providers.

IMPROVEMENT

Add contact details and the current year to every footer. Offer low-commitment next steps such as an IT security checklist, a cybersecurity or cloud-readiness assessment, or an AI opportunity review, **once Cloud Power confirms what it can deliver.**

Footer: Privacy Policy and © 2025 only.

04 / MARKETING & SEO

Findability and credibility

Search appearance, local relevance and editorial consistency are part of the sales funnel.

Search snippets and metadata

RECORDED AUDIT SAMPLE

The October audit sample reports **14 of 20 pages** without unique meta descriptions. Examples seen in search include “Let is handle” and template copy from “Our Story”. Search results also showed “Coud Power”.

IMPROVEMENT

Re-crawl the live site and assign unique titles/descriptions for commercial pages: “Managed IT Services Luxembourg”, “Cybersecurity Luxembourg”, “SOC as a Service Luxembourg”. Remove or noindex unfinished pages until complete.

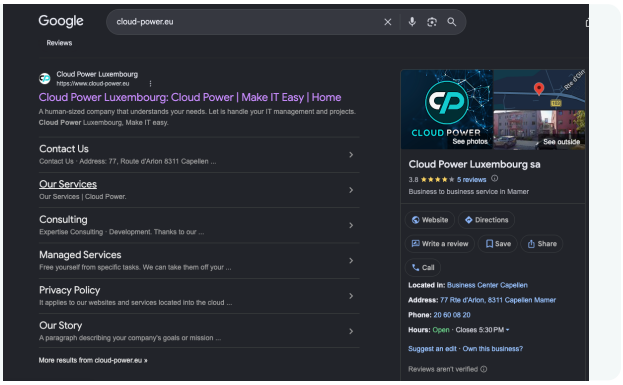

Local presence and languages

GOOGLE SEARCH SNAPSHOT

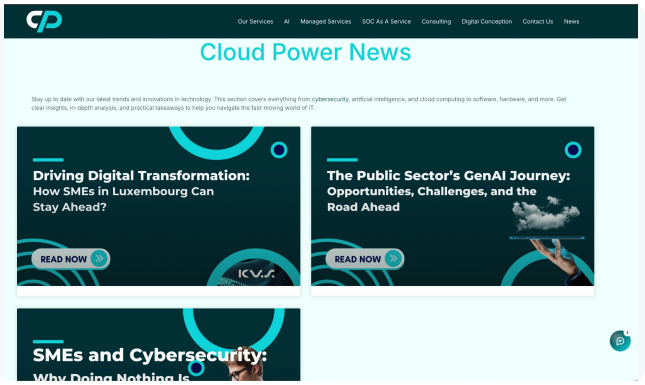

The captured Google Business Profile displayed a **3.8 rating from 5 reviews** and opening hours that differed from the website. The “Own this business?” prompt alone does **not** prove the profile is unclaimed. Main site content was in English.

IMPROVEMENT

Have the business owner verify listing ownership and correct opening hours; enrich services, approved photos and replies. Prioritise French and then German on core conversion pages based on customer demand.

Google search and Business Profile (snapshot; confirm current data).

News: three article cards in the captured page view.

Content, SME support and AI offer

EDITORIAL SNAPSHOT

The captured News page shows three articles; the newest was dated October 2025 in the audit. Article headings embedded inside images weaken readability and machine-readable context. AI services are broad but not productised into clear buying decisions.

IMPROVEMENT

Publish useful articles with real HTML headings and a relevant CTA; turn projects into case studies. Create solution-led AI landing pages (Knowledge Assistant, IT Helpdesk, Workflow Automation). Use SME Packages only after eligibility and offer terms are confirmed.

05 / CUSTOMER JOURNEY

Turn services into outcomes

Proposed information architecture, to be validated with the sales and service teams.

START WITH A BUSINESS PROBLEM

Frequent IT disruption	→ **Managed IT Services**
Cyberattack risk / monitoring	→ **Cybersecurity & SOC**
Cloud migration or hosting	→ **Cloud Solutions**
Repetitive business workflows	→ **AI & Automation**
Limited in-house capacity	→ **IT Consulting**
New website / application	→ **Digital Development**

SERVICE PAGE FORMULA

Problem → Solution → Benefits → Proof → CTA

PROPOSED HOMEPAGE FLOW

01 Hero: positioning + primary CTA

02 Client logos (with permission)

03 Business problems solved

04 Core service categories

05 Why Cloud Power (validated claims)

06 Verified company facts

07 Structured case studies

08 Approved testimonials

09 Insights / useful articles

10 Final CTA: speak to a specialist

REUSABLE MARKETING CONTENT

Case study: Client → Challenge → Cloud Power solution → Verified business outcome → Approved quote → “Discuss a Similar Project”.

AI product pages: Use one scenario per offer (Knowledge Assistant, Customer Support, IT Helpdesk, Workflow Automation). Show a concrete use case and discovery-call CTA.

News: Connect each article to the relevant service with one short, contextual next action.

WHY CLOUD POWER (CLAIMS TO VALIDATE)

Local expertise: a Luxembourg team that knows local businesses.

One technology partner: cloud, cybersecurity, managed IT, AI and development in one place.

Continuous security: monitoring and protection, not one-off projects.

Business-focused IT: every service described by the result it brings to the client.

06 / SUMMARY

Recommended action plan

A short delivery sequence ranked by visibility, trust and potential impact on enquiry conversion.

P0 Before the next public campaign / handoff

- **Remove or finish placeholder pages**, fix obvious copy errors, and correct contact links and footer contact details.
- **Verify measurement** with GA4/Google Ads account owners: consent, lead events, attribution and test submissions.
- **Repair contrast** on CTAs and key headings; standardise the main contact journey.

P1 Next redesign sprint

- Rewrite the homepage offer and group services by customer problems; standardise service-page CTAs and forms.
- Improve mobile loading and layout; rerun Lighthouse/PageSpeed under consistent settings.
- Publish approved client proof, one flagship case study and unique SEO descriptions for priority pages.

P2 After core conversion fixes

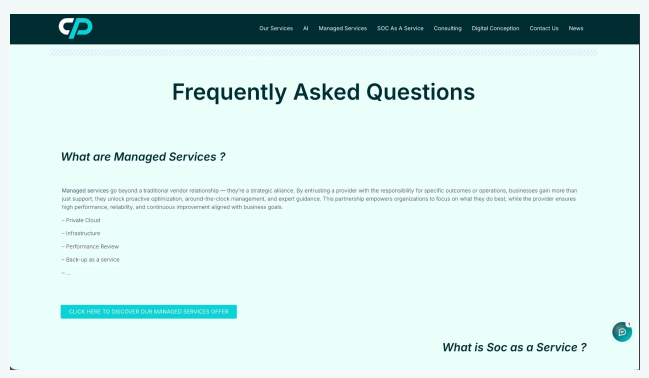

- Add French-first localisation for key pages, then German if customer research confirms value.
- Develop AI offer pages, regular expert content and useful lead magnets; strengthen the Google Business Profile.

VALIDATION BEFORE PUBLICATION

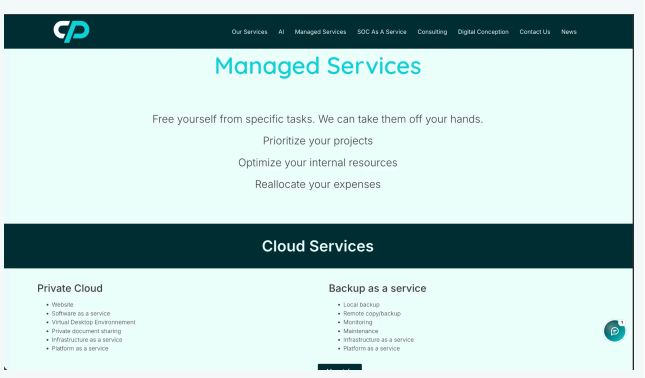

Confirm proposed service promises, assessment availability, certifications, client references, response times and SME Package eligibility with Cloud Power. Confirm analytics findings with account access; recheck live SEO metadata, search profile and PageSpeed scores before using them as current claims.

COPY ISSUES TO FIX FIRST

Proofread before any campaign: “More Informations”, “Virtual Desktop Environnement”, “appoitnment”, “Coud Power”, “Let is handle”, the unfinished FAQ list ending in “– …”, and mixed “Soc” / “SOC” spelling.

Home FAQ: list ending in “– …”.

Managed Services: “Environnement”.

Evidence note: observations and screenshots come from the October 2026 review of the public Cloud Power website. This is a marketing/UX snapshot, not a penetration test, a live analytics audit or legal advice. Any forecast of uplift requires baseline leads and post-launch measurement.
