

Mini UX and UI Audit

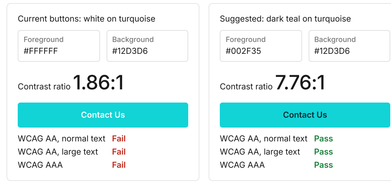

Evaluating UI, UX, and Product Experience

UI (User Interface)

Color and Contrast

Observation : The bright brand turquoise (#12D3D6) is used for page titles, buttons and highlights on a pale mint background (#EEFFFD). Turquoise titles on mint measure only 1.8:1 and white text on turquoise buttons 1.86:1, far below the 4.5:1 that WCAG AA requires for normal text. In the “About Our Company” block the paragraph text is light grey on the light background and almost invisible.

Improvements : Keep turquoise as an accent (icons, lines, highlights) and set text and buttons in the dark brand teal (#002F35): dark teal on mint reaches 13.96:1, dark teal on turquoise 7.76:1. Check that every text block stays readable even when a background image or video does not load.

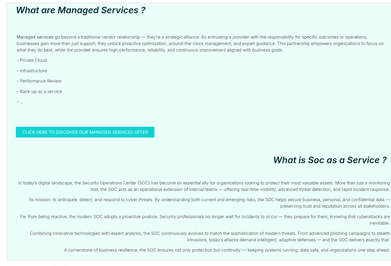

“About Our Company” on the home page: the text that says Cloud Power exists since 2017 is hard to read.

Typography

Observation : Four typefaces are mixed (Inter, Inter Tight, Quicksand, Poppins) plus the system font inside the forms, and page titles switch between Quicksand and Inter from page to page. Title Case is used almost everywhere (“Feel Free To Contact Us”, “SOC As A Service”) next to all-caps buttons. The FAQ answers on the home page are long blocks set centred or right-aligned, which makes them tiring to read.

Improvements : Use one typeface (Inter) with a fixed size scale for titles, subtitles and text, sentence case for titles and buttons, and left-aligned paragraphs.

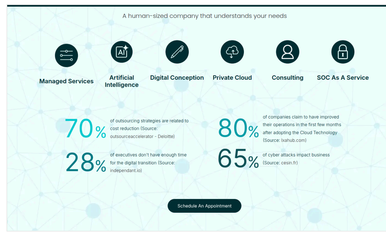

Home page FAQ: long paragraphs, centred and right-aligned.

Layout Clarity

Observation : On the home page the services appear only as six icons with a name and no description, while four statistics from other organisations’ studies (70 %, 80 %, 28 %, 65 %) take more room than Cloud Power’s own offer. “Why choose Cloud Power?” shows four general cards (Commitment, Experience, Trust, Integrity) without facts.

Improvements : Give each main service its own block with one or two lines on what the client gets and a link to the service page. Move the third-party statistics lower or replace them with Cloud Power’s own figures.

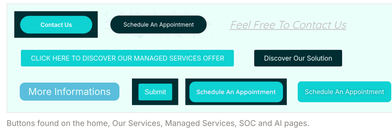

“Our DNA”: services as icons only, third-party statistics.

Button Design

Observation : At least nine button styles are in use: pills and squares, outlined and filled, an underlined text link, all-caps and Title Case, 16 to 27 px text, in four colours. Most of them have white text on turquoise (1.86:1), so they are hard to read and do not stand out as the main action.

Improvements : Define one primary button (dark teal, white text) and one secondary button (outlined), with the same size, shape and wording style on every page.

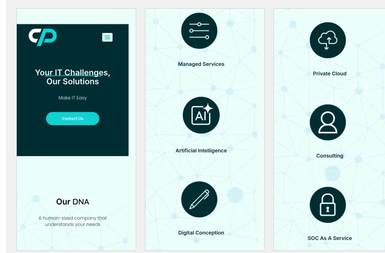

Buttons found on the home, Our Services, Managed Services, SOC and AI pages.

Responsiveness

Observation : On a phone the home page is 8,668 px long, against 5,289 px on a desktop. The six service icons are stacked one under the other and fill about two and a half screens before any text about them appears; the statistics follow the same pattern.

Improvements : Show the services in a two-column grid (or a swipeable row) on phones, shorten the sections and keep body text at 16 px or more.

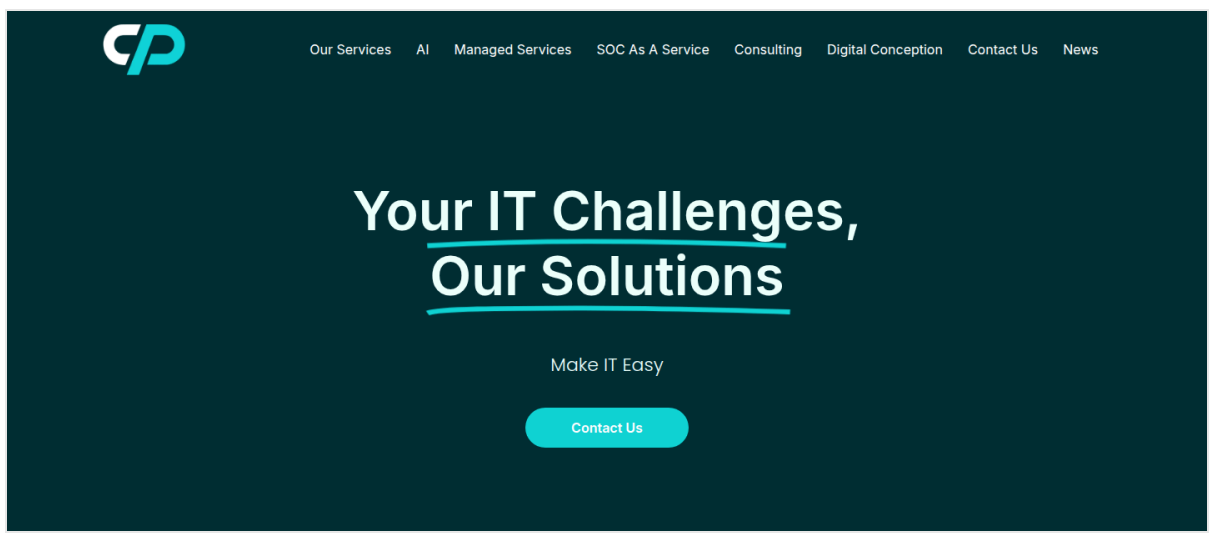

Home page on a phone (390 px wide): first three screens.

UX (User Experience)

Purpose Clarity

Observation : The headline “Your IT Challenges, Our Solutions – Make IT Easy” could belong to any IT company. The first screen does not say what Cloud Power offers (managed IT, 24/7 SOC, private cloud, AI), for whom (SMEs, the public sector) or where (Luxembourg, a local team). These strengths only appear further down or in the description shown by Google.

Improvements : Write a headline that names the offer, the audience and the place, for example “Managed IT and 24/7 cybersecurity for Luxembourg businesses”, add two or three short benefits and one clear call to action.

First screen of the home page.

Navigation Ease

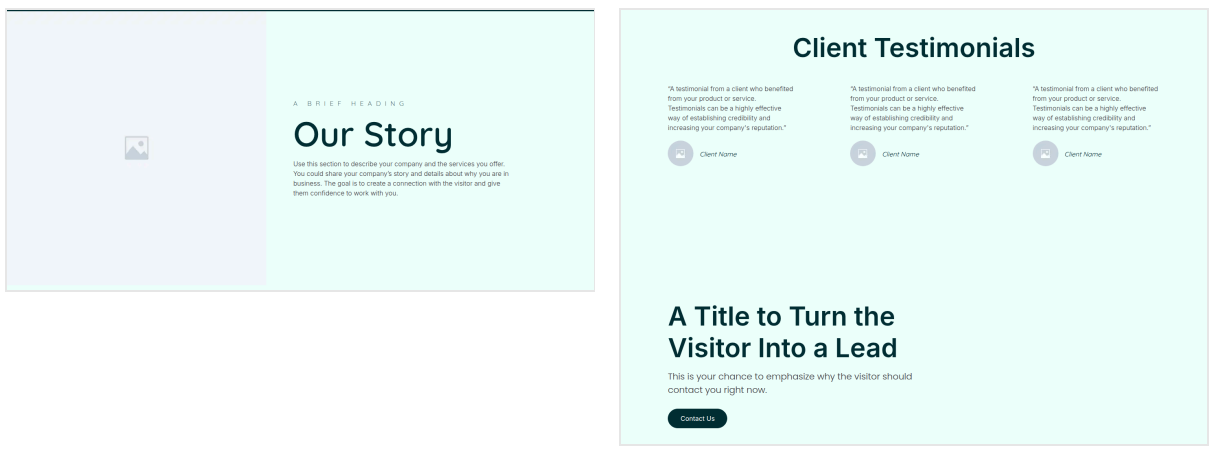

Observation : The header lists eight links with the same weight (Our Services, AI, Managed Services, SOC As A Service, Consulting, Digital Conception, Contact Us, News). “Contact Us” looks like every other link, so there is no visible main action. The footer only holds “Privacy Policy” and “© 2025”: no phone number, address, e-mail or LinkedIn.

Improvements : Group the services under one “Services” menu, make the contact action a highlighted button, and put the phone number, e-mail, address and opening hours in the footer of every page.

Content Simplicity

Observation : Several answers and descriptions are long paragraphs of 100 to 150 words. In addition, template pages are public and listed for Google: “Our Story” still shows the theme’s placeholder texts (“A Title to Turn the Visitor Into a Lead”, “Client Name”, grey image placeholders), and “Sample Page” and “Global Styles” are the default WordPress and theme pages.

Improvements : Split long texts into short paragraphs, bullet points and subheadings. Delete the template pages or replace them with real content, and remove them from the sitemap.

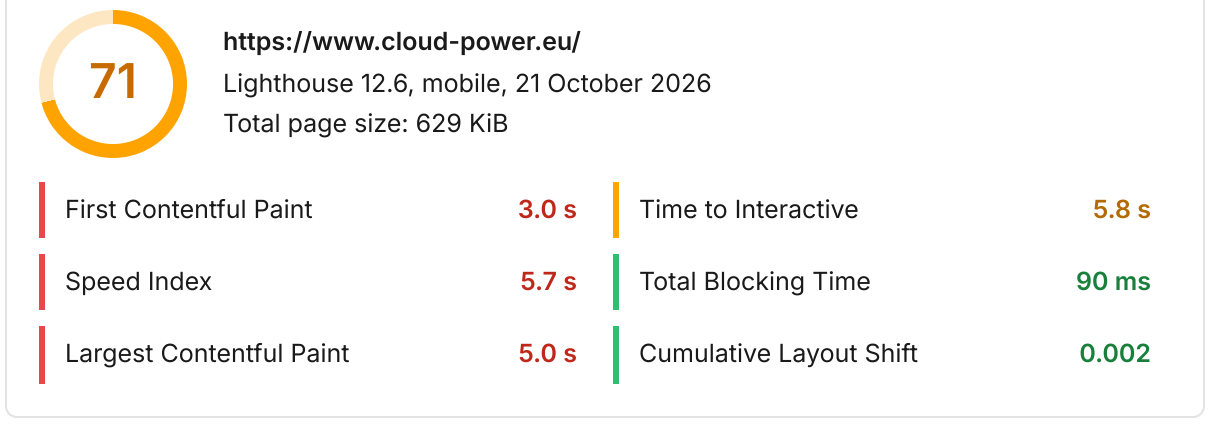

/our-story/: placeholder texts on a public page.

Load Speed

Observation : Google Lighthouse (phone) scores the home page 71/100: the main content appears after 5.0 s, while Google counts up to 2.5 s as good. Managed Services scores 67/100 (main content after 7.0 s), Contact Us 88/100.

Improvements : Compress the large images and the background video, load images further down the page only when needed, remove unused plugins and scripts, and turn on caching (or a CDN).

Trust Elements

Observation : There are no client logos, testimonials, case studies, certifications or team photos. The strongest facts are hidden: “Since January 2017” sits in the hard-to-read “About Our Company” block, and a real client story (KV Smart) is published as a news post at “/2025/10/02/elementor-1824/” in the “Uncategorized” category. Visible typos also hurt credibility: “appoitnment”, “Let is handle” and “Coud Power” (the last two in Google’s search results), “Infrastucture”, “Archicects”, “More Informations”.

Improvements : Add client and partner logos (with their consent), two or three testimonials, the KV Smart story as a case study, the number of years and clients, and photos of the team. Proofread all pages.

Conversion Optimization

CTA Visibility

Observation : The main buttons have low contrast and generic, changing labels: “Contact Us”, “Click Here”, “More info”, “More Informations”, “Discover our solution”, “Feel Free To Contact Us”. The first screen offers only “Contact Us”, without saying what happens next.

Improvements : Use one high-contrast main action, repeated on every page with the same wording, such as “Book a free 30-minute call”, and a secondary action where it helps (“See our services”).

Value Proposition

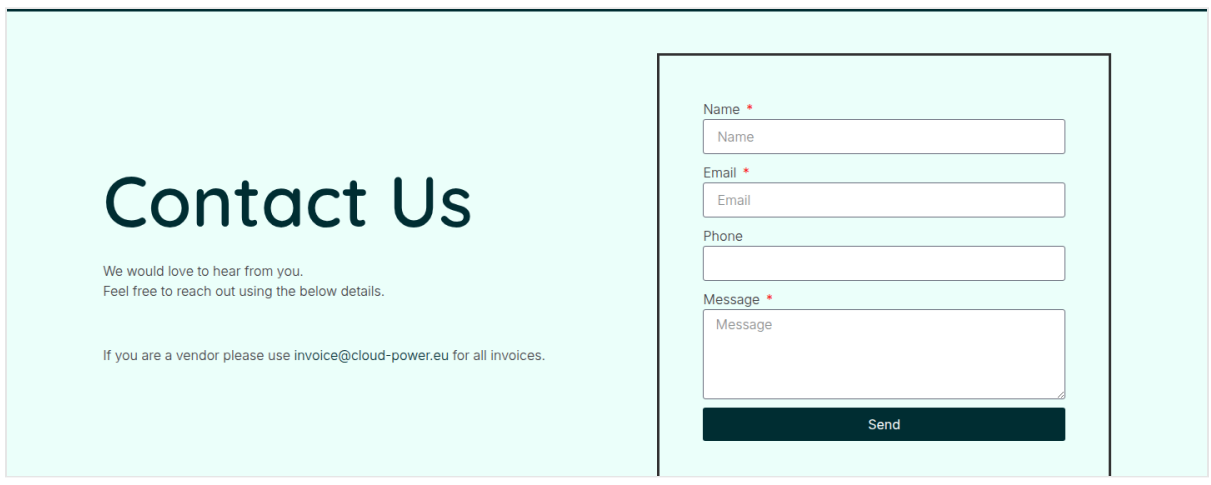

Observation : The services are described with technical terms (IaaS, PaaS, “Observability & Performance Automation Services”, “CERT security package”) rather than the result for the client. With eight services of equal weight, it is unclear which one is the main offer or where to start.

Improvements : For each service, state the problem, what Cloud Power does and the result for the client in plain words, and put the two or three main offers first.

Form Efficiency

Observation : Two different form systems are used: the Contact Us page (name, e-mail, phone, message, “Send”) and the service pages (first and last name separately, fields in another order, “Submit” in a different font). On the Contact Us page the phone number and sales@cloud-power.eu are plain text that cannot be tapped, while the only clickable e-mail is invoice@ for suppliers.

Improvements : Use one short form on every page, make the phone number and sales e-mail clickable, and check that every form arrives in the same inbox.

Contact Us: only the supplier e-mail is clickable.

Social Proof

Observation : The only figures on the site come from other organisations’ studies. Nothing shows Cloud Power’s own results: number of clients, years in business, response times or availability.

Improvements : Show a few verified figures (for example years since 2017, number of clients, response time) next to logos and testimonials.

Conversion Tracking

Observation : Google Analytics and a Google Ads tag are installed, but there is no cookie banner. For visitors from the EU, including Luxembourg, the site sets “no consent” by default, so in our test no visit and no enquiry was recorded. Ads and enquiries therefore cannot be measured.

Improvements : Add a cookie banner that works with the existing setup (WP Consent API) and track form submissions, bookings and phone clicks as conversions. Agree the banner texts with whoever is responsible for data protection.

Urgency/Incentives

Observation : Nothing gives a reason to act now: there is no free first step and no offer. Luxembourg’s SME Packages (public support for cybersecurity and AI projects) are mentioned only inside one blog article.

Improvements : Offer a concrete first step, such as a free 30-minute IT or security check, and mention SME Packages support on the matching service pages once the conditions are confirmed.

Summary

What’s wrong?

The Cloud Power website has a strong offer but struggles with readability, clarity and trust. The turquoise used for titles and buttons has very low contrast, four typefaces and nine button styles make the site look inconsistent, and long centred paragraphs are hard to read. The first screen does not say what Cloud Power sells, to whom or where, and eight equal menu links hide the main action. Public template pages, typos, and the absence of logos, testimonials and figures weaken credibility. Two different forms, a phone number that cannot be tapped, slow loading on phones and missing conversion tracking cost enquiries that cannot even be counted today.

Quick Improvement Plan

Enhance Readability

- Dark teal text and buttons; turquoise only as an accent.
- One typeface, sentence case, left-aligned short paragraphs.

Clarify Value Proposition

- Headline with offer, audience and place, plus one main call to action.
- Service blocks with plain benefits; two or three main offers first.

Fix Trust Issues

- Remove or finish the template pages (Our Story, Sample Page, Global Styles).
- Add logos, testimonials, the KV Smart case study and own figures; proofread.

Simplify Contact

- One form, one button style, clickable phone and e-mail in header and footer.
- A free first step and SME Packages where they apply.

Measure and Speed Up

- Cookie banner and conversion tracking for forms, bookings and calls.
- Compress images and video, remove unused scripts, enable caching.
