Mini UX, UI, Marketing and Conversion Audit

Evaluating the interface, user experience, sales and marketing performance

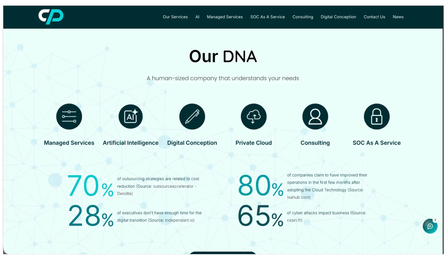

www.cloud-power.eu · October 2026

UI (User Interface)

Visual Hierarchy

Observation : The site has a clean base, but most blocks carry the same visual weight. On the home page, six service icons, four large third-party statistics and the call to action compete for attention, so visitors are not guided from the main message to the services, the proof and the contact.

Improvements : Rank the content: main offer first, then core services, proof of trust, secondary information and the call to action. Use size, spacing and contrast so the eye follows that order.

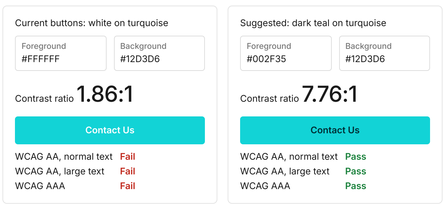

Home page, "Our DNA": service icons and third-party statistics with equal weight.

Color and Contrast

Observation : The bright turquoise (#12D3D6) is used for page titles and buttons on a pale mint background. Turquoise titles on mint measure 1.8:1 and white text on turquoise buttons 1.86:1, below the 4.5:1 that WCAG AA requires for normal text.

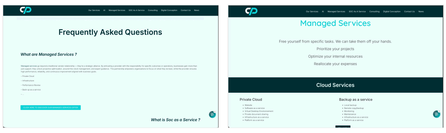

Improvements : Keep turquoise as an accent and set text and buttons in the dark brand teal (#002F35): 13.96:1 on mint, 7.76:1 on turquoise.

Typography and Copy Quality

Observation : The typography looks modern, but the English text is uneven, and for a company selling cybersecurity, cloud and IT consulting, text quality directly affects trust. Examples: "Let is handle your IT management" (the description Google shows), "Coud Power", "Virtual Desktop Environnement", "More Informations", "appoitnment", "Soc as a Service" next to "SOC", and an unfinished list ending in "– ..." in the home page FAQ.

Improvements : Proofread every page in professional business English, with special care for page titles, service descriptions, menu, buttons, news, metadata and contact details. Use one spelling for each service name.

Left: home page FAQ, a list ending in "– ...". Right: Managed Services, "Environnement".

Service Presentation

Observation : Cloud Power offers many services: managed IT, SOC, private cloud, AI, consulting, web and mobile development, infrastructure and performance review. They are presented as technologies, so a visitor sees a long list but not which service solves their problem.

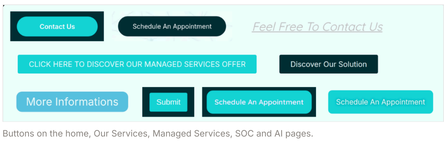

Improvements : Present the services through the client's problems as well:

Frequent IT issues and downtime	→	Managed IT Services
Risk of cyber attacks	→	Cybersecurity / SOC
Moving to the cloud	→	Cloud Solutions
Repetitive business processes	→	AI & Automation
No in-house IT experts	→	IT Consulting
New website or platform	→	Digital Development

Button Design

Observation : At least nine button styles are in use (pills and squares, filled, outlined and underlined, 16 to 27 px text, four colours), with labels such as "Click Here", "More info", "More Informations" and "Feel Free To Contact Us" that do not say what happens next.

Improvements : Use one primary button style and one main action across the site, such as "Book an IT Assessment" or "Talk to an IT Expert", and specific actions on service pages: "Request a Security Assessment", "Discuss Your Project", "Book an AI Discovery Call".

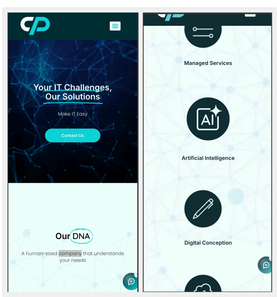

Buttons on the home, Our Services, Managed Services, SOC and AI pages.

Responsiveness and Content Structure

Observation : On a phone the home page is about 8,700 px long. The six service icons are stacked one per screen, so visitors scroll through several screens of icons before reaching any proof or a call to action.

Improvements : Use compact grids or cards for services on phones, shorter descriptions and collapsible blocks, and show the main offer, the call to action, the benefits and client proof earlier.

Home page on a phone: the first screen and the stacked service icons.

UX (User Experience)

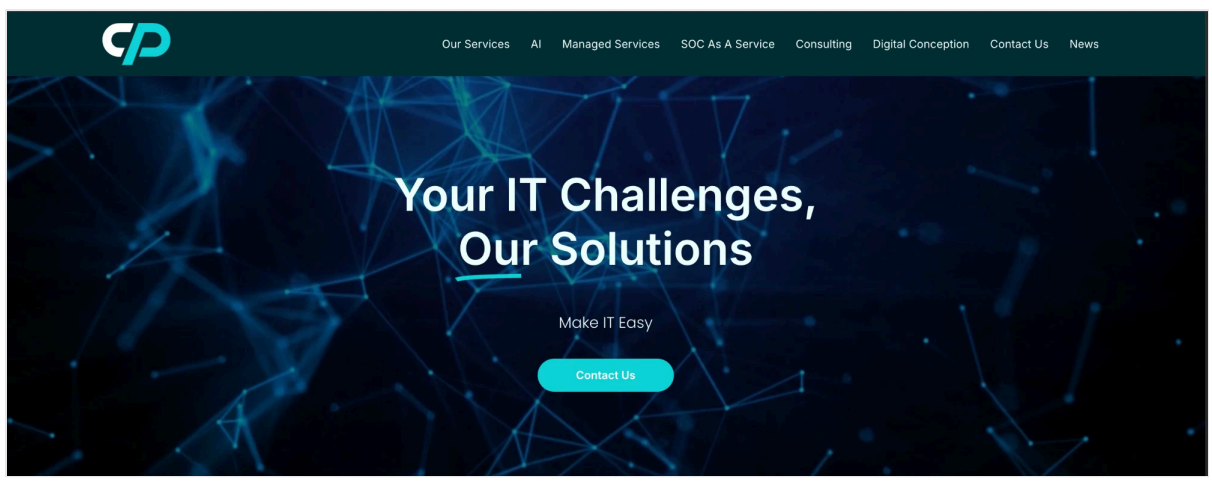

Purpose Clarity

Observation : The home page opens with “Your IT Challenges, Our Solutions – Make IT Easy”. It looks good but could belong to any IT company: a new visitor does not learn who Cloud Power works for, what it specialises in, or why to choose it.

Improvements : The first screen should state the positioning. For example:

> **Secure. Manage. Modernize Your IT.**
> Cloud, cybersecurity, AI and managed IT services delivered by a local Luxembourg team.
> Primary button: **Book an IT Assessment** · Secondary: **Explore Our Services**

Wording to be confirmed by Cloud Power.

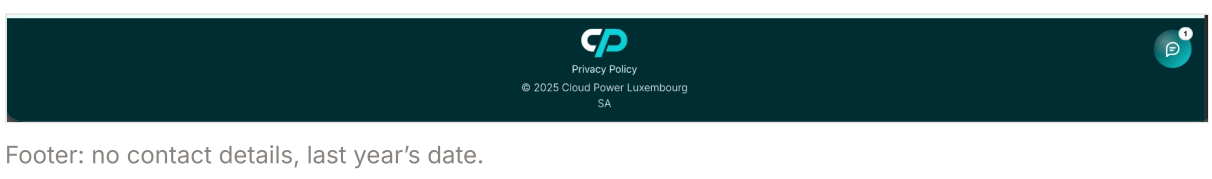

First screen of the home page.

Navigation

Observation : The header lists eight links with the same weight (Our Services, AI, Managed Services, SOC As A Service, Consulting, Digital Conception, Contact Us, News); “Contact Us” does not stand out as the main action. The footer only holds “Privacy Policy” and “© 2025”: no phone, e-mail, address or LinkedIn.

Improvements : Group the services under one “Services” menu (Managed IT, Cybersecurity, Cloud, AI & Automation, Consulting, Digital Solutions), make the contact action a highlighted button, and add contact details to the footer of every page. Build each service page as Problem → Solution → Benefits → Proof → Call to action.

Footer: no contact details, last year’s date.

Content Simplicity

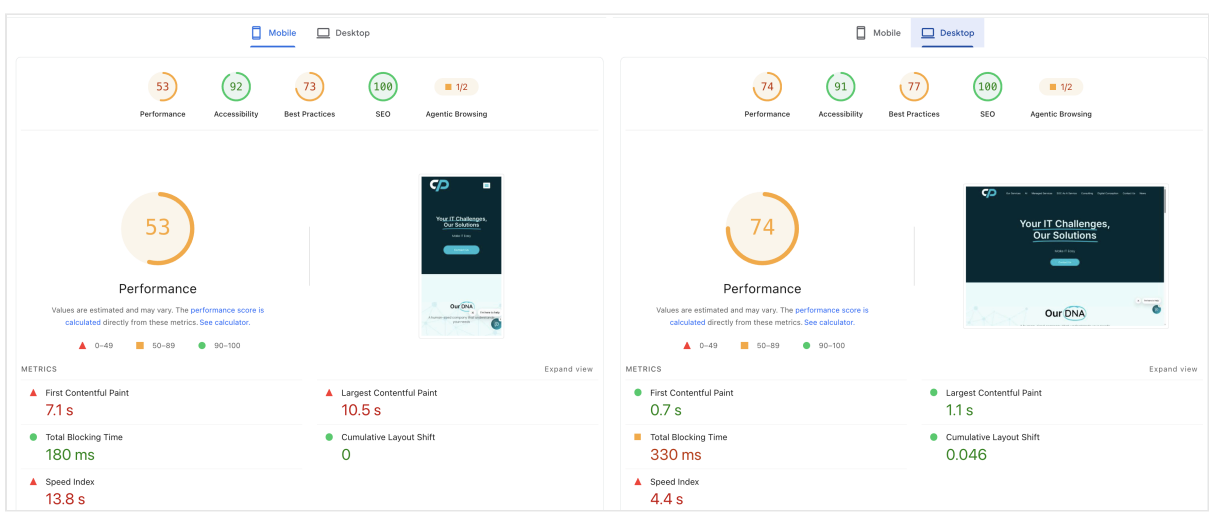

Observation : Several pages describe technologies rather than results. Managed Services, for example, lists “Software as a service”, “Infrastructure as a service” and “Platform as a service”, and the FAQ answers are long paragraphs.

Improvements : Write from the client’s outcome and keep technical details lower on the page. Instead of “We provide infrastructure management solutions”: “Keep your systems reliable, secure and monitored without building a large internal IT team.”

Load Speed

Observation : Google PageSpeed (phone) scores the home page 53/100: the main content appears after 10.5 s, while Google counts up to 2.5 s as good. On a desktop the page scores 74/100 and appears after 1.1 s, so the problem is the mobile version.

Improvements : Compress the large images and the background animation, load content further down only when needed, remove unused plugins and scripts, and use caching or a CDN.

Google PageSpeed Insights for cloud-power.eu: phone (left) and desktop (right).

Trust Elements

Observation : For a company selling cybersecurity, cloud and managed IT, trust decides the sale, yet most claims (“Commitment”, “Experience”, “Trust”, “Integrity”) come from the company itself. Worse, the “Our Story” page is still the theme’s template (“A brief heading”, “Use this section to describe your company…”, an empty picture), and Google shows its placeholder text in the search results. The strong fact that Cloud Power has existed since January 2017 is hidden in a general paragraph.

Improvements : Finish or remove “Our Story”. Show client logos, testimonials, case studies, partners, certifications, years in business and the local presence in Luxembourg before asking for an enquiry.

Left: “About Our Company” (home). Right: /our-story/, the theme’s template text.

Case Studies

Observation : Cloud Power has real clients and projects: the KV Smart story, for example, is published as a news article, but no project is presented as a case study.

Improvements : Create a “Case Studies” section with the same structure for each: client, challenge, Cloud Power’s solution, technologies, result, client quote, and a “Discuss a Similar Project” button.

Conversion Optimization

CTA Visibility

Observation : There are many buttons, but most use generic labels (“Contact Us”, “More Info”, “Click Here”) that do not explain the value of the action.

Improvements : Use specific actions such as “Book a Free IT Assessment”, “Talk to a Cybersecurity Expert”, “Request a Security Review”, “Discuss Your IT Project”, with one clear main action on every important page.

Value Proposition

Observation : The site shows a broad technical offer but does not clearly answer: why choose Cloud Power rather than another IT company?

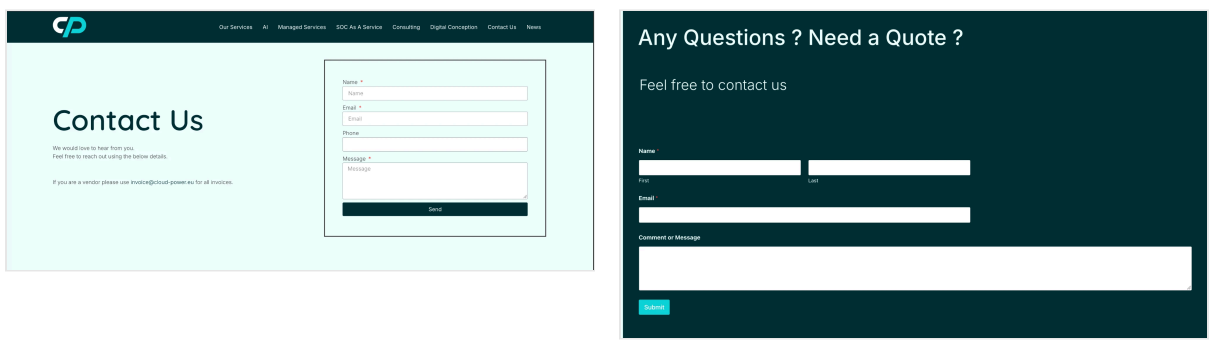

Improvements : Add a “Why Cloud Power” section, for example: **Local Expertise** (a team in Luxembourg that knows local businesses), **One Technology Partner** (cloud, cybersecurity, managed IT, AI and development together), **Continuous Security** (monitoring and security services), **Business-Focused IT**. Each point should be backed by real proof.

Examples to be confirmed by Cloud Power.

Form Efficiency

Observation : Two different forms are used: Contact Us (Name, Email, Phone, Message, “Send”) and the service pages (First and Last name, no phone, “Comment or Message”, “Submit”). Neither asks what the enquiry is about, and neither says what happens after sending. The phone number and sales@cloud-power.eu on Contact Us are plain text that cannot be tapped.

Improvements : Use one form everywhere with an “I’m interested in” choice (Managed IT, Cybersecurity, Cloud, AI & Automation, Consulting, Digital Development, Other) and a short note: “A Cloud Power specialist will review your request and contact you shortly.” Make the phone number and e-mail clickable.

Left: the Contact Us form. Right: the form on the service pages.

Social Proof

Observation : Social proof is barely used. The only numbers are statistics from other organisations’ studies, and the Google rating shown next to the site is 3.8 stars from 5 reviews.

Improvements : Add “Trusted by Businesses” with client logos, then “What Our Clients Say” (name, company, role, short quote, concrete result), linked to the case studies. Ask satisfied clients for Google reviews.

Conversion Tracking

Observation : Google Analytics and a Google Ads tag are installed and Cloud Power runs Google Ads, but there is no cookie banner. For visitors from the EU, including Luxembourg, the site sets “no consent” by default, so in our test no visit and no enquiry was recorded. Ads and enquiries therefore cannot be measured.

Improvements : Add a cookie banner that works with the existing setup (WP Consent API) and track form submissions, bookings and phone clicks as conversions, after agreeing the texts with whoever is responsible for data protection.

Checked from outside Luxembourg; worth confirming in Google Analytics.

Lead Generation

Observation : The site relies on visitors being ready to call or write at once. Visitors at an earlier stage have nothing lighter to take.

Improvements : Offer lighter first steps: a free IT security checklist, a cybersecurity assessment, a cloud readiness checklist, an AI opportunity assessment or an IT infrastructure review. Luxembourg’s SME Packages (public support for cybersecurity and AI projects) are mentioned in one article and could support these offers once the conditions are confirmed.

Marketing & SEO

Positioning

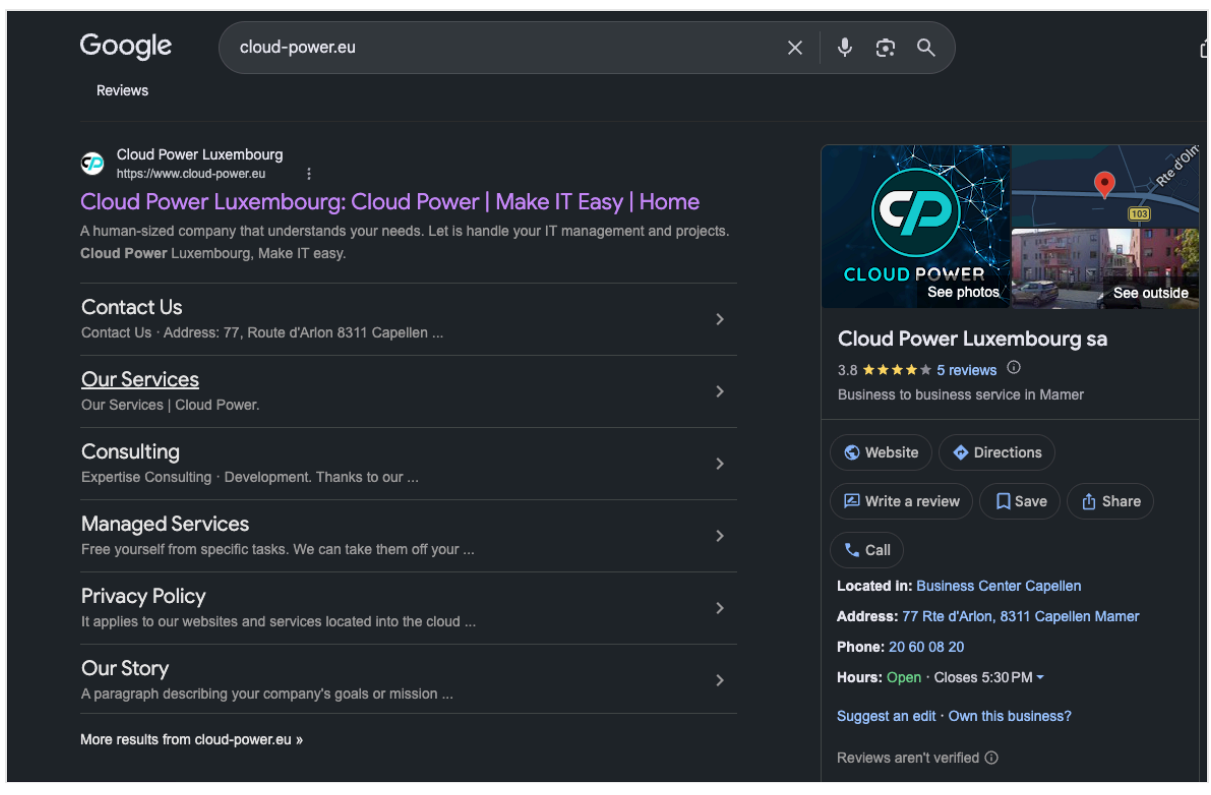

Observation : The wide range of services shows technical strength but can make Cloud Power look like a generalist without a clear specialisation.

Improvements : Define one positioning that ties the services together, for example: “Your Luxembourg technology partner for secure, modern and scalable IT.”

Search Appearance

Observation : In Google, the home page description contains the typo “Let is handle”, “Our Services” is described only as “Our Services | Cloud Power.”, and the “Our Story” result shows the template text “A paragraph describing your company’s goals or mission…”. In our check, 14 of the site’s 20 pages had no description of their own.

Improvements : Write a title and description for every page, targeting commercial searches: “IT Services Luxembourg | Cloud Power”, “Managed IT Services Luxembourg | Cloud Power”, “Cybersecurity Services Luxembourg | Cloud Power”, “SOC as a Service Luxembourg | Cloud Power”, “Cloud Solutions Luxembourg | Cloud Power”. Give each main service its own landing page.

Google results for cloud-power.eu, with the business profile on the right.

Google Business Profile

Observation : The business profile shows “Own this business?”, which suggests it has not been claimed. Its opening hours (“Closes 5:30 PM”) do not match the website (Mon–Fri 9:00–17:00), and it has 5 reviews with 3.8 stars.

Improvements : Claim and verify the profile, align the hours, add office photos and services, and reply to reviews. It is one of the cheapest ways to win local clients.

Contact Us: the hours on the website.

AI Services

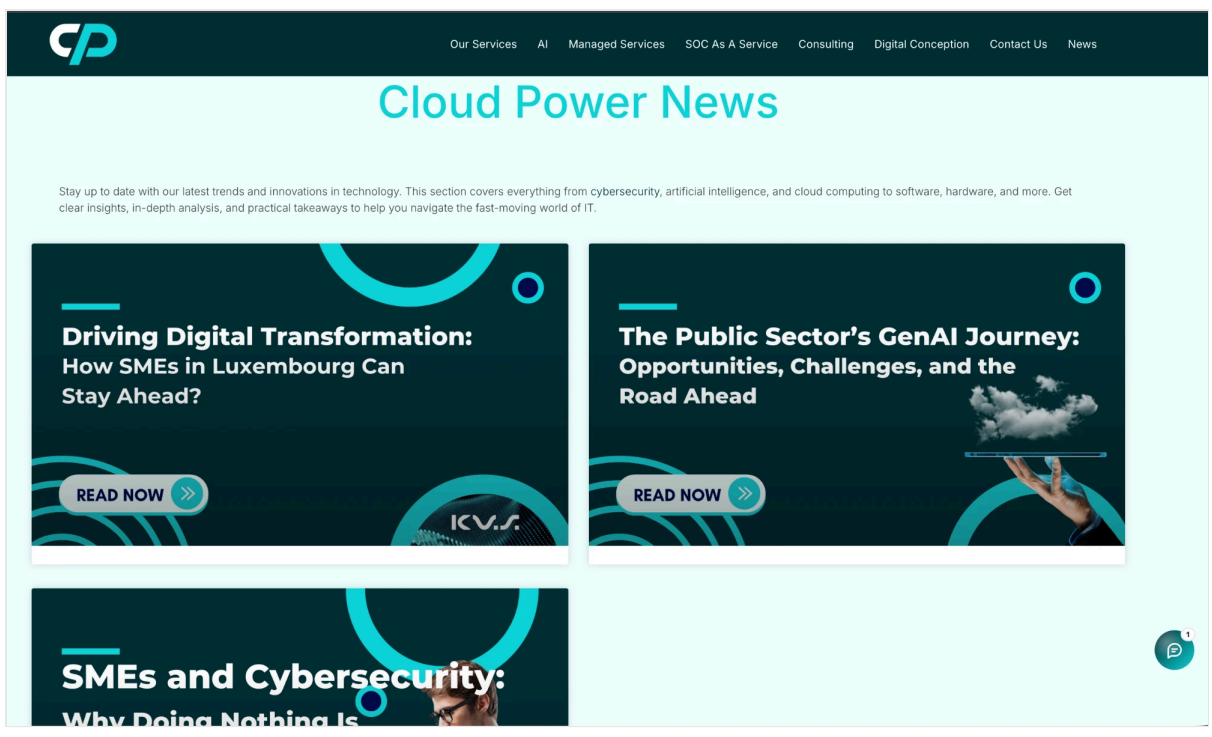

Observation : The AI offer covers many areas, which shows capability but stays abstract: a client understands that Cloud Power works with AI, not which product to order.

Improvements : Split AI into concrete solutions, such as an AI Knowledge Assistant, AI Customer Support, an AI IT Helpdesk and AI Workflow Automation, each shown as Problem → AI solution → Example → Business result → Call to action.

News and Content Marketing

Observation : Cloud Power writes about cybersecurity, AI, SMEs, digital transformation and the public sector, which helps SEO. But there are only three articles, the latest from October 2025, the article titles are drawn on images (search engines and screen readers cannot read them), and the articles rarely lead to a next step.

Improvements : Publish regularly, put titles in real text, and end each article with a matching call to action, for example “Concerned about your company’s cybersecurity exposure? Request a Security Assessment →”.

Cloud Power News: three articles, titles inside images.

Language

Observation : The whole site is in English only, while French and German are the business languages of Luxembourg.

Improvements : Translate at least the home page, the service pages and Contact into French, then German.

Summary

What’s wrong?

Cloud Power has a strong technical offer and a modern visual base. The weak points are not the number of services or the expertise, but how the site sells them: a generic positioning with little difference from competitors, low-contrast and inconsistent buttons, uneven English, service descriptions about technology rather than results, little visible proof (a template “Our Story” page that even appears in Google, 3.8 stars from 5 reviews, no case studies), two different forms, slow loading on phones (10.5 s) and advertising whose results cannot be measured.

Today the site answers “What does Cloud Power do?” It answers less well: Why Cloud Power? Why can I trust them? What result will my business get? Which service fits my problem? What should I do next?

Quick Improvement Plan

This week

- Finish or remove “Our Story”; fix the typos and the “– …” list.
- Claim the Google Business Profile and align the opening hours.
- Make the phone number and e-mail clickable; add them to the footer.

Improve the value proposition

- Rewrite the first screen: who Cloud Power serves, what it offers, one main call to action.
- Group services around client problems; describe business results.

Strengthen trust

- Client and partner logos, testimonials, certifications, years since 2017.
- Turn real projects such as KV Smart into case studies.

Improve conversion

- One button style, one main action, specific actions per service.
- One form with “I’m interested in” and a note on what happens next.
- A cookie banner and conversion tracking; lighter first steps (assessments, checklists).

Marketing and SEO

- Titles and descriptions for every page, with Luxembourg keywords; landing pages per service.
- Faster mobile pages; French and German versions; regular articles with a call to action.

Recommended Home Page Structure

1. **Hero**: clear positioning and the main call to action
2. **Client logos**: companies that already trust Cloud Power
3. **Problems we solve**
4. **Core services**: Managed IT, Cybersecurity, Cloud, AI, Consulting, Digital
5. **Why Cloud Power**
6. **Company figures**: real, verified numbers
7. **Case studies**
8. **Testimonials**
9. **Insights / News**
10. **Final call to action**: Talk to an IT Expert

Screenshots taken on cloud-power.eu, Google search and Google PageSpeed Insights in October 2026. Contrast ratios measured on the site’s colours. Nothing on the website was changed.
