Website analysis cloud-power.eu

What holds back marketing and sales · short report

21 October 2026

Summary

Cloud Power has a strong offer: managed services, 24/7 SOC, private cloud, AI, and a local team in Luxembourg. The website does not yet turn visitors into enquiries well. We found problems in three areas:

- **enquiries:** they cannot be counted;
- **trust:** the site shows no proof, but unfinished pages are public;
- **search:** Google shows the site less well than it could.

#	Main problem	How it hurts sales	Priority
1	Google Analytics and Google Ads are on the site but receive no data: there is no cookie banner, and without the visitor's consent tracking stays off	No one can see where customers come from or whether ads pay off	high
2	Template pages are public and visible to Google: "A Title to Turn the Visitor Into a Lead", "Client Name", "Sample Page"	A customer sees an unfinished site and loses trust	high
3	No proof: no client logos, testimonials, case studies, certifications or team	IT and security services are bought from people you trust	high
4	The first screen does not say what is sold, to whom or where. The site is in English only	A Luxembourg visitor does not see at once that it is for them	high
5	Getting in touch is awkward: two different form systems, and the sales phone and e-mail cannot be clicked and are missing from the header and footer	Some people who want to get in touch give up	medium
6	SEO: 14 of 20 pages have no description for Google, typos show in search results, and pages load slowly on phones (67–71 out of 100)	Fewer people find the site and click on it	medium

What already works. Yoast SEO is set up, and the site has a sitemap, HTTPS, online booking through Odoo, an FAQ on the home page and articles on topics that matter to customers. One article contains a real customer story (KV Smart): ready-made material for a case study.

How we checked: all 20 pages in the cloud-power.eu sitemap, opened in a browser on desktop and phone. Speed was measured with Google Lighthouse. Read-only: no form was sent and nothing on the site was changed.

A · Enquiries and sales

A1 · Ads and enquiries are not measured high

The site runs Google Site Kit (Analytics) and a Google Ads tag (`AW-17212464839`). For visitors from the EU, including Luxembourg, the site sets "no consent" for analytics and ads by default. Only a cookie banner can change that, but the site has no plugin for such a banner. In our check no banner appeared, no cookies were created, and not a single statistics request was sent to Google.

How it hurts sales. If Cloud Power pays for Google Ads, it cannot see which ads bring enquiries. Google cannot optimise the campaigns, and marketing makes decisions blind.

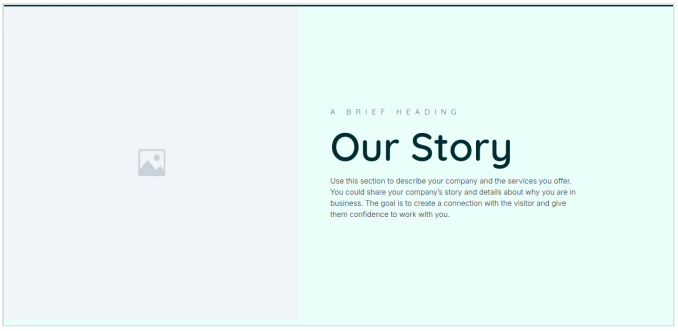

> **What to do:** add a cookie banner that works with the WP Consent API (e.g. Complianz or CookieYes). Then set up "conversions" in Analytics and Ads: form sent, online booking and phone click. Agree the banner texts with whoever is responsible for data protection.

We did not check from Luxembourg. It is worth looking in Google Analytics to see whether visitor data arrives.

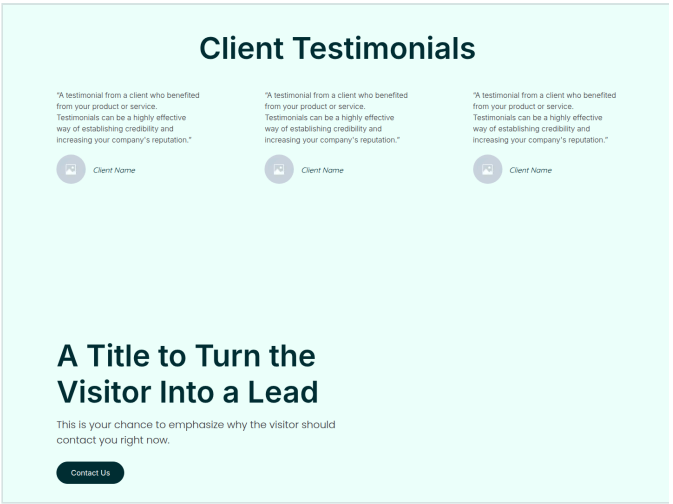

A2 · Unfinished pages are public high

These pages are in the sitemap and open to Google:

- **Our Story:** template text, grey placeholders instead of photos, "Client Name" testimonials, and the heading "A Title to Turn the Visitor Into a Lead";
- **Sample Page:** the standard WordPress text about a "bike messenger" and the "XYZ Doohickey Company";
- **Global Styles:** an internal colour page;
- the "Author: admin" and "Uncategorized" archives.

/our-story/: a template instead of the company's story

Same page: empty testimonials and "A Title to Turn the Visitor Into a Lead"

How it hurts sales. A customer who reaches such a page through Google or a link sees an unfinished site. For a company that sells reliability and security, this is especially damaging.

> **What to do:** delete Sample Page and Global Styles. Fill Our Story with the real story or delete it. Hide the archives from Google in Yoast. This takes less than an hour.

A3 · No proof of trust high

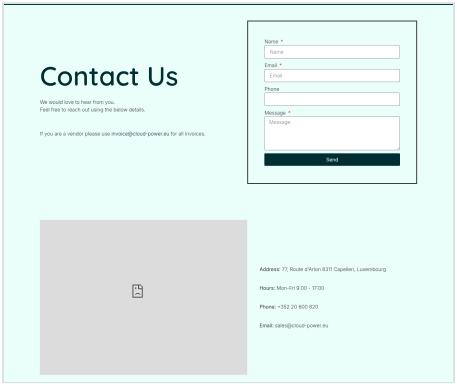

The site has no client logos, testimonials, case studies, certifications, team faces or figures about the company, such as years in business or number of clients. "Why choose Cloud Power?" is made of general words: Commitment, Experience ("years of experience" with no number), Trust, Integrity. The figures on the home page (70 %, 65 % and others) come from other organisations' studies and say nothing about Cloud Power.

Yet a customer story already exists: the article about KV Smart. But it is hidden among the news, at `/2025/10/02/elementor-1824/` and in the "Uncategorized" category.

> **What to do:** turn KV Smart into a case study ("challenge → solution → result") linked from the home page and the service pages. Add client and partner logos (with their consent), 2–3 testimonials, team photos and one or two figures about the company.

A4 · Getting in touch is harder than it should be medium

- **Two different form systems:** Contact Us has one form (Elementor: name, e-mail, phone, message). Five service pages have another (WPForms), with the fields in a different order. Check that enquiries from both arrive in the same place.
- **Many different button labels:** "Contact Us", "Schedule an appointment", "Click Here", "Feel Free To Contact us", "More info", "More Informations", "Submit", "Send".
- **The phone number +352 20 600 820 and sales@cloud-power.eu** appear only on Contact Us, and they cannot be clicked: they are plain text. The only clickable e-mail on that page is `invoice@`, for suppliers.
- **Footer:** only "Privacy Policy" and "© 2025". No phone, address or LinkedIn.

Contact Us: the invoice e-mail can be clicked, the sales phone and e-mail cannot

> **What to do:** one form on every page and one clear main button, e.g. "Book a call". Clickable phone and sales@ in the header and footer. In the footer: address, opening hours, LinkedIn and the current year.

A5 · The blog looks abandoned low

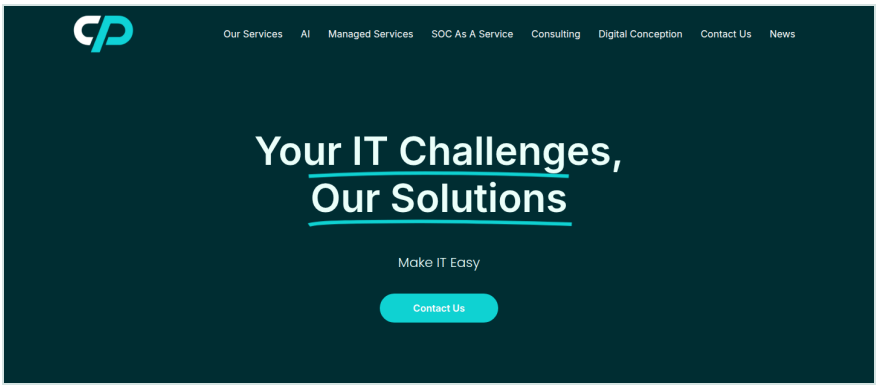

The last article came out in October 2025, a year ago. Under the articles the WordPress comment form "Leave a Reply" is open. It looks unprofessional and attracts spam.

> **What to do:** turn comments off. Publish at least one article a month on topics customers search for (NIS2, backups, SOC for SMEs), with a booking button at the end.

B · Texts and positioning

B1 · The first screen does not explain the offer high

The heading "Your IT Challenges, Our Solutions / Make IT Easy" fits any IT company in the world. It does not say what Cloud Power does (managed IT, 24/7 SOC, cloud, AI), for whom (SMEs, the public sector) or where (Luxembourg, a local team). These strengths appear only further down, or only in the description for Google.

Home page: a generic heading and one button

> **What to do:** put the essence in the heading, e.g. "Managed IT & 24/7 cybersecurity for Luxembourg SMEs". Below it: 2–3 short benefits, the main booking button and a trust line (logos or a figure).

B2 · English only high

The whole site is in English, with no other language. The business languages of Luxembourg are French and German, and many SME and public-sector managers search for services in them. Today the site can hardly appear in Google for French or German searches.

> **What to do:** translate at least the home page, the service pages and Contact into French, then German. Link the language versions for Google (hreflang).

B3 · Typos that customers see medium

Some typos appear directly in Google's search results:

Where	Now	Should be
Our Services title in Google	Our Services | **Coud** Power	Cloud Power
Home page description in Google	**Let is handle** your IT management	Let us handle
Home page, booking	schedule an **appoitnment**	appointment
Our Services	**Infrastucture**, **Archicects**, web **develoment**, Virtual Desktop **Environnement**	Infrastructure, Architects, development, Environment
Home page, source	**independant**.io	to check
Managed Services, button	More **Informations**	More information

> **What to do:** one proofread of all pages by a native speaker.

B4 · Sales arguments not used medium

- **Public support.** The KV Smart article mentions SME Packages (Cybersecurity, AI), Luxembourg's public support for SMEs. The service pages say nothing about it. For SMEs this is a strong argument. Check the conditions with the House of Entrepreneurship before writing about them.
- **No "first step".** No "from" price, no package, no free first call or assessment with a clear result.
- **No main offer.** The menu has 8 equal items and Our Services lists 8 services. It is unclear where to start.

> **What to do:** choose 2–3 main offers, each with a clear first step (e.g. "free 30-minute security check"). Mention SME Packages support where it applies.

C · SEO and Google

C1 · How the site looks in Google medium

- **No description** (meta description) on 14 of 20 pages, including Contact Us, Managed Services, SOC, Consulting and BaaS. Google picks a random piece of text instead. Our Services has a description, but it is only "Our Services | Cloud Power".
- **Page headings (H1).** The home page has 4 H1 headings, 2 of them empty. BaaS, Digital Conception, Contact Us and News have no H1 at all.
- **Weak browser-tab titles:** "Cloud Power | Make IT Easy | Home - Cloud Power Luxembourg" (the name twice). The News page title has no company name.
- **Weak addresses:** the SOC address is 100 characters long, and an article's address is `elementor-1824`.
- **Images without a description (alt):** 9 of 11 on Our Services.

> **What to do:** in Yoast, write a title and description for every page, with one H1 per page. Fix the addresses and redirect the old ones. For the services sold first, mention the place ("Luxembourg") in the text.

C2 · Speed on phones medium

Page (phone)	Google Lighthouse score	Main content appears (LCP)
Home	71 / 100	5.0 s
Managed Services	67 / 100	7.0 s
Contact Us	88 / 100	2.6 s

Google counts an LCP of up to 2.5 s as good. Slow pages lose visitors before they see the offer, and Google ranks such pages lower.

> **What to do:** compress large images and the background video, remove unused plugins and scripts, and turn on caching.

Measured on 21 October 2026, Lighthouse 12, phone mode. Figures vary slightly from one run to the next.

Action plan

When	What to do	Who
This week (a few hours)	• delete Sample Page and Global Styles, fill or delete Our Story, hide the archives from Google; • fix the typos; • make the phone and sales@ clickable and add them to the header and footer; • turn comments off.	website administrator
Within a month	• cookie banner and conversions in Google Analytics and Ads; • one form and one main button; • new first screen; • Google descriptions and one H1 on every page; • faster pages on phones.	marketing and administrator; the banner with whoever is responsible for data protection
Within a quarter	• KV Smart case study, logos, testimonials, team; • 2–3 main offers with a first step; • French, then German version; • one article a month.	marketing, sales

How to tell it worked: after A1, track in Google Analytics the number of enquiries, bookings and calls per month and where they come from. Compare each next step against that figure.
